## Community Needs Assessment Workbook Contributors

List the names of people in your community, the organizations they represent, and the contributions they made to complete this workbook in Table 1 below.

Table 1. Workbook Contributors

Name	Organization	Contribution
Lynette Saucedo	Practice Program	Regular input and effort with the entire workbook
Wendy Applegarth	Youth Alternatives	Regular input and effort with the entire workbook
Danielle Wondercheck	Project Coordinator	Data collection and workbook completion
John Barrera	Peak Wellness	Regular input and effort with the entire workbook
Joel Burrian	Peak Wellness	Regular input and effort with the workbook
Deb Ochsner	EWC	Regular input for portions of the workbook
Marilyn Cotant	EWC	Regular input for portions of the workbook
Patty Harmon	EWC	Input for portions of the workbook
Leroy Schafer	City of Torrington	Regular input and effort with the workbook
Linda Schafer	Community Member	Regular input and effort with the workbook
Torrington Police Department		Input for specific sections of workbook/community interviews
Goshen County Sheriff's Office		Input for specific sections of workbook/community interviews

## Local Data Sources

In Table 2 below, list all the local data sources used in this workbook as well as a description of the data, and where it came from.

Table 2. Local Data Sources

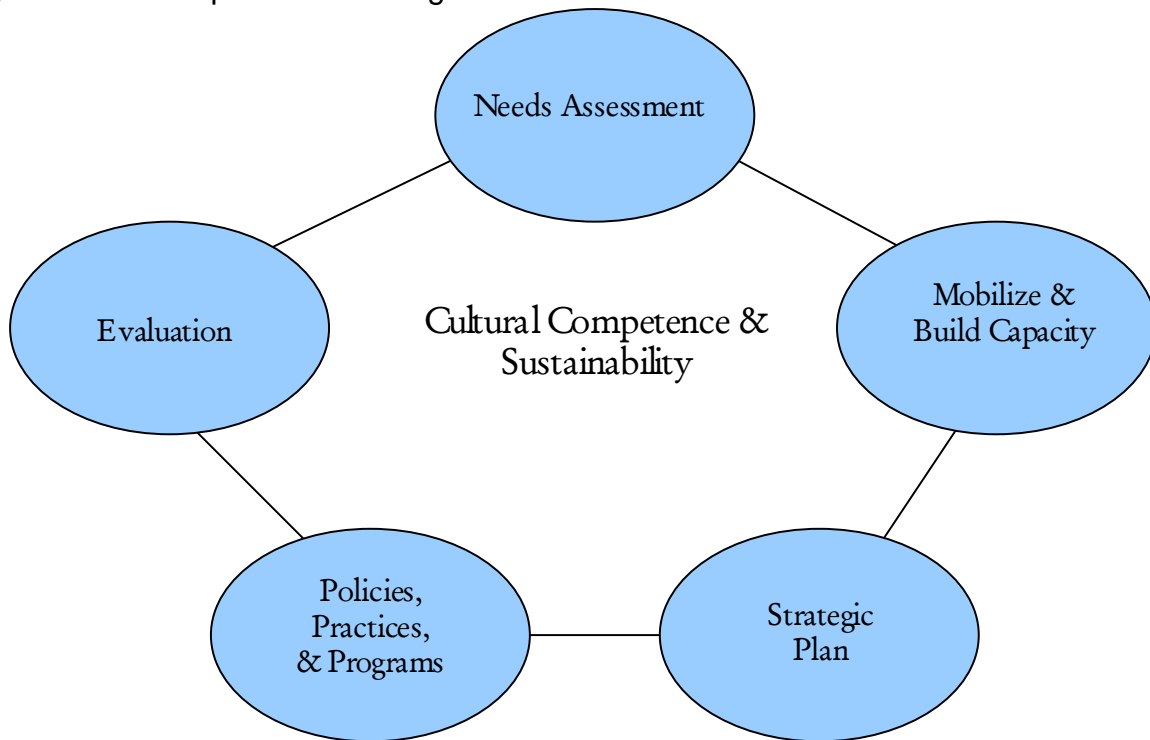

Data Source	Data Description	Data Location
Town Hall Meeting	Community input on specific questions regarding misuse of alcohol	Community Members
Personal Interviews/Community/Schools/Law Enforcement	Community input on specific questions regarding misuse of alcohol in Goshen County	Professionals within Goshen County
Courts	Data for alcohol related crimes/incidents in Goshen County	Circuit Court
YRBS		
PNA		
Torrington Telegram	Data collection regarding alcohol advertisements	

## Introduction

Wyoming received the Strategic Prevention Framework State Incentive Grant (SPF SIG) from the Federal Substance Abuse Mental Health Services Administration (SAMSHA) on September 30, 2004, along with 20 other states and territories.

The purpose of the project is to implement the five components of the SPF planning model at both state and community levels in Wyoming. The following diagram details this process (Center for Substance Abuse Prevention, 2005).

Figure 1. Five Steps of the Strategic Prevention Framework Process

At the state level, Wyoming has completed the needs assessment and funding allocation plan. Mobilization and capacity building take place throughout the project. Wyoming's needs assessment identified the targeted problem as the misuse of alcohol and its consequences, and Wyoming's allocation strategy funds all 23 counties and the Wind River Reservation as Prevention Framework (PF) community grantees. The first step for grantees is to complete a comprehensive needs assessment for their communities.

## Outcome-Based Prevention

The foundation of the PF process is the outcome-based prevention model (Lowther & Birckmayer, 2006).

Figure 2. PF Needs Assessment Logic Model

In this model, a community details its substance-related consumption and consequence data, researches the causal areas that may impact these problems, and chooses evidence-based policies, practices, and programs to address the identified causal areas.

## Purpose

The purpose of this workbook is to help PF funded communities go through the outcome-based prevention model. The first step is to complete a comprehensive needs assessment. This means that grantees, and the community partnerships, must accurately assess their problems using epidemiological data, and they must do research to understand what may influence these problems. To be effective, you should not complete this workbook alone. Instead, you and your Community Advisory Council (CAC) should work together to complete this task.

Keep in mind that Wyoming has already identified the targeted need for this project—the misuse of alcohol.

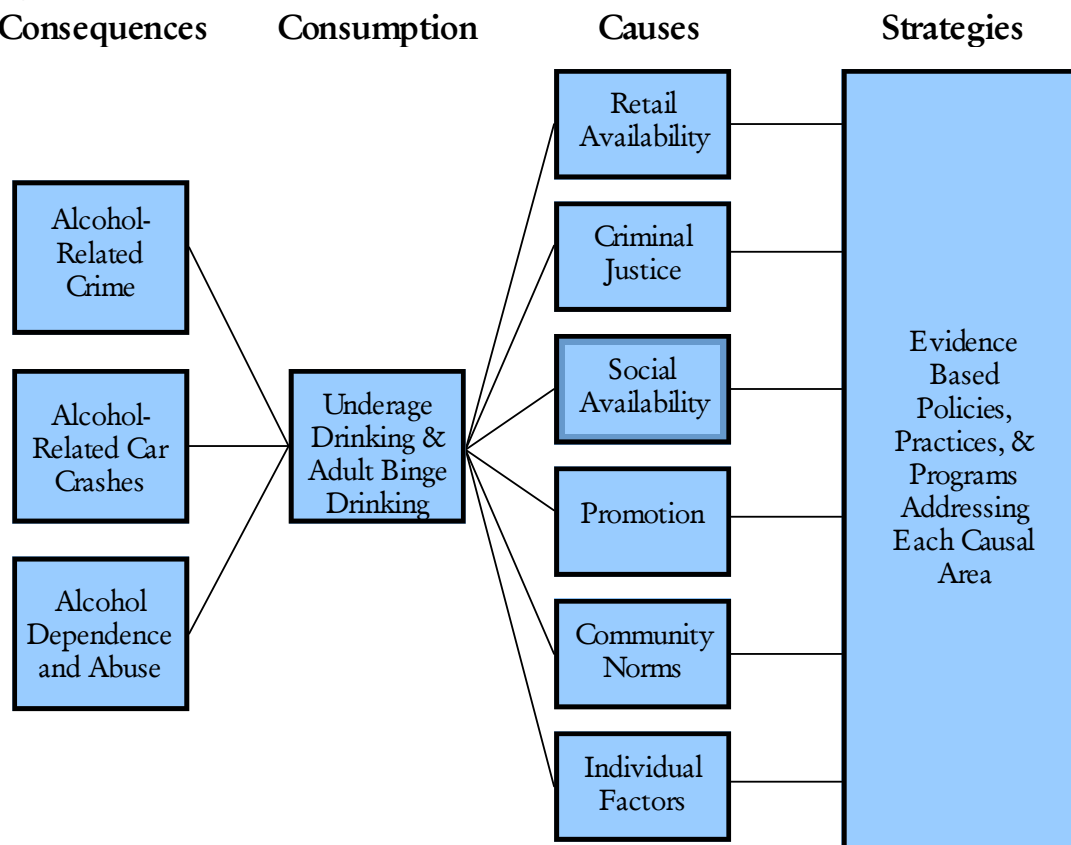

### **“Misuse of alcohol” means that:**

1. The primary target for the PF is underage drinking, and adult binge drinking. Underage drinking refers to any use of alcohol by anyone under the age of 21, while adult binge drinking refers to those 18 years and older who have five or more drinks on any one occasion.
2. The secondary target for the PF is the most significant consequences of the misuse of alcohol in Wyoming: alcohol-related crime, alcohol-related motor vehicle crashes, and alcohol dependence and abuse.

## Workbook Organization

The tasks that follow are based on the outcome-based prevention model and recent research detailing the causal areas of substance-related problems. There are four major sections (problems, causes, prioritization, and resource assessment). Within each there are data to collect and questions to answer. Following from Wyoming's targeted need (the misuse of alcohol) and the known causal areas; the previous model can be expanded to include evidence-based strategies, as illustrated in Figure 3 (Birckmayer, Holder, Yacoubian, & Friend, 2004).

Figure 3. Outcome-Based Prevention Model

Each grantee must complete the tasks that follow to detail the problems and influences surrounding the misuse of alcohol in their community. This will lead to focused mobilization and capacity building, as well as aid in the prioritization of evidence-based strategies within the community's strategic plan.

The work that follows involves gathering data to illuminate both the problem(s) and the casual area(s) that contribute to the problems in your community. This is achieved by answering a series of questions. Most of the data you gather will exist in various data sources, but you will also have to do some original research. Data gathering includes:

- Existing survey results
- Original data collection
- Interviews with key partners and stakeholders

- A town hall meeting with interested community members and leaders

It must be noted that most of the existing local level data used in this workbook are available at the county level. Therefore, completion of this workbook may be more challenging for the Wind River Indian Reservation than for other communities. The Reservation will certainly have to collaborate with the Fremont County project, and at times alternative measures may need to be used. Grantee communities should complete this workbook as thoroughly as possible working with their Community Advisory Council and WYSAC researchers.

### **Collection of Existing Survey Results**

Much of the data that will be used in this workbook will already have been publicly reported. When possible, you will be referred to a website or other public data source to find your community's information. In other areas, where local level data is less available, WYSAC has placed the existing survey results within this workbook's tables and appendices. Point estimates are used for simplicity, and it is acknowledged that these estimates may vary according to their margin of error. The instructions in each section will direct you and provide guidance on how to interpret the results from existing data sources.

In addition to the existing data sources that are specifically outlined in this workbook, local surveys or other local data are encouraged to be used as sources of auxiliary information to aid in the decision making process. For instance, many community colleges may have results from the National College Health Assessment (NCHA). In addition, your community may have already gathered survey results from businesses or from local law enforcement that may help in the needs assessment.

### **Interviews with Key Partners and Stakeholders**

You will also interview key partners and stakeholders in your community to help provide a better picture of their concerns within your community regarding the misuse of alcohol. One particular set of stakeholders that you will be asked to interview are the law enforcement officials in your community. A sample protocol for these law enforcement interviews is given in this workbook's Appendix B, and a brief description of the information that is to be gathered in the law enforcement interviews is provided in the law enforcement section. Interviews with other stakeholders will provide local information in other areas of this workbook.

### **Town Hall Meeting**

As part of the data collection, you will conduct a town hall meeting to gather community views regarding what factors influence the misuse of alcohol in your community. In particular, you will need to find out how the community thinks social availability, community norms, and individual factors impact the misuse of alcohol in your community. A description on how to conduct the town hall meeting, and the types of information that will need to be gathered from the town hall meeting is provided in Appendix C.

## Collection of Original Data

In several areas of this workbook you will be asked to gather information using specified designs. This data collection will include such things as counting the number of billboards that advertise alcohol, or counting the number of events where alcohol companies or distributors are sponsors. The point of this data collection is to gather information directly from your community by observation or library research. In all cases, the original data collection will be measures that are easily gathered. The original data that you collect will be sent to WYSAC by April 30, 2007. The WYSAC researchers will use the data from all 24 grantees to derive state level comparisons and, where appropriate, grantee rankings. The results from this original research will be returned to you by May 15, 2007, so you can integrate that information into this workbook. Table 3 below provides a quick reference for the deadlines for the collection of original data as well as the workbook itself.

Table 3. Deadlines for Original Data Submission, Return of Aggregate Results, and Final Workbook Completion

Due Date	Product
April 30, 2007 Send the following products to WYSAC	Percentage of drive-up liquor windows, percentage of convictions for alcohol-related crime, number of officers assigned to alcohol-related issues and crimes, percentage of community events and festivals with alcohol-related sponsors, and number of billboards advertising alcohol, number of advertisements in local newspapers advertising alcohol
May 15, 2007	Aggregate data with state level results sent back to communities for comparison
June 15, 2007	Community Needs Assessment Workbook completed and sent to the Substance Abuse Division

A final copy of the Community Needs Assessment Workbook should be submitted electronically to:

Lisa Laake, MPH, CHES  
Wyoming Mental Health and Substance Abuse Services Division  
6101 Yellowstone Road, Suite 220  
Cheyenne, WY 82002

# Problems

**Task One:**  
**Explore Alcohol Consequences and Consumption Data in Your  
Community in Order to Identify What Problems  
are of Greatest Concern**

## Consequences

This first section looks at alcohol-related consequence data and will help you identify which alcohol-related consequences are of greatest concern in your community. Alcohol-related consequences are defined as the social, economic, and health problems associated with the use of alcohol, such as crime and car crashes. It is recognized that not all communities will experience exactly the same problems, and to help identify individual community problems, you will conduct a needs assessment in relation to alcohol misuse and its consequences.

## Alcohol-Related Crime

One of the major consequences of drinking alcohol is alcohol-related crime. Your task will be to obtain information on alcohol-related arrest rates in your community by going to the following website: <http://attorneygeneral.state.wy.us/dci/>. Once you have arrived at this website, the following directions will allow you to find your county's arrest results.

- In the middle of the page, click the link titled "Crime in Wyoming Reports."
- In the middle of the page, click and select the year in which you are interested (you will need information from the six most recent annual reports.)
- Select the county in which you are interested (county information starts about page 33 in each of the annual reports.)
- Find your county's arrest numbers for each individual year. Record in Tables 4 through 9, the number of arrests for driving under the influence, liquor law violations, and drunkenness (within the annual reports, adult information can be found in the left hand column, while juvenile information in the right hand column.) For Tables 4, 5, and 6 add adult males and females together and put the totals in the Tables. For Tables 7, 8, and 9 add juvenile males and females together and put the totals in the Tables.)
- Tables 4 through 9 also request your county population estimates. These numbers are available in the workbook Appendix A (Tables B and C) using numbers from the US Census Bureau. Adult crime estimates will be based on the population estimates of people who are over 18 (Table B). The juvenile population will use the results in Table C for people who are 10 to 17.
- To obtain the totals from 2000-2005, sum all six years together.
- To work out the rate per 100,000 population, divide the number of county arrests for the year(s) by the county population for those years and multiply by 100,000.
- Under the rate comparison column use a "+" if your county rate is higher than the Wyoming rate, use "-" if your county rate is lower than the Wyoming rate, and use "=" if the rates are about the same.

For Wyoming's rate per 100,000 population, the calculations would look like this:

$$\begin{aligned}\text{Adult DUI rate (2000-2005)} &= \frac{\text{Number of Adult DUI Arrests in Wyoming}}{\text{Wyoming Adult Population for the Time Period}} * 100,000 \\ &= \frac{26,490}{2,277,429} * 100,000 \\ &= 1163.15\end{aligned}$$

Table 4. Driving under the Influence (Adults)

Year	Number of County Arrests	County Population	Rate per 100,000 Population	Wyoming Number of Arrests	Wyoming Rate per 100,000 Population	Rate Comparison
2000	110	12555	876.14	4,386	1197.48	-
2001	67	12449	538.2	4,357	1178.21	-

### Other Local Data

Feel free to consider and analyze other local data that will help identify and detail problems around the consequences of alcohol-related crime. For example, you may have information from local surveys, you may know about trouble spots, or specific alcohol-related strategies that the police are implementing. You may have local data on Minors in Possession (MIP) arrests and/or citations. If you have other local data describe the results here.

### Question 1.

Based on Tables 4 through 9 and other local data, how does alcohol-related crime in your community compare to alcohol-related crime across the state? Is your problem bigger, smaller or about the same? Discuss the differences. Do you think the arrest data accurately reflects the related problems in your community, why or why not?

Our alcohol-related crime according to the data provided on the Attorney General – dcj website is much lower than the state average, however, local law enforcement personnel have explained that a lot of problems occur outside of city limits and it makes it difficult to “bust” the large number of individuals involved in alcohol related crime. Our population is spread out over an immense area of land and that makes it even more difficult for law enforcement to provide coverage necessary to arrest individuals participating in alcohol-related crimes.

Many members of our Coalition have strong feelings on the inaccuracy of the statistics being provided by the reports on the Attorney General’s website. They believe, as a group, that Goshen County’s alcohol-related crime is at least equal if not higher than the state average.

To provide another set of estimates for your county, the Youth Risk Behavior Survey (YRBS) data may often be obtained from your local schools and/or school districts. If you can obtain this information you will want to include this in Tables 10 through 13.

- Under the percentage comparison column in Tables 10 and 12 use a “+” if your county percentage is higher than the Wyoming percentage, use “-” if your county percentage is lower than the Wyoming percentage, and use “=” if the percentages are about the same.
- In Tables 11 and 13, record whether the time trend is increasing using a “+” symbol, a “-” symbol for a decreasing trend, a “=” symbol for a stable trend, and a “?” for an unclear trend.

Table 10. Percentage of Students That Said They Rode in a Car or Other Vehicle Driven by Someone Who Had Been Drinking Alcohol One or More Times during the past 30 Days (2005 YRBS)

Grade	County	Wyoming	Percentage Comparison
9 <sup>th</sup>		27.5%	
10 <sup>th</sup>	Information not available in Goshen County	28.2%	
11 <sup>th</sup>		33.3%	
12 <sup>th</sup>		30.2%	
9 <sup>th</sup> -12 <sup>th</sup>		29.7%	

Table 11. Percentage of Students That Said They Rode in a Car or Other Vehicle Driven by Someone Who Had Been Drinking Alcohol One or More Times during the past 30 Days (2001-2005 YRBS)

Grade	2001 County Data	2003 County Data	2005 County Data	Trend
9 <sup>th</sup>				
10 <sup>th</sup>	Information not available in Goshen County			
11 <sup>th</sup>				
12 <sup>th</sup>				
9 <sup>th</sup> -12 <sup>th</sup>				

Table 12. Percentage of Students That Said They Drove a Car or Other Vehicle When They Had Been Drinking Alcohol One or More Times during the past 30 Days (2005 YRBS)

Grade	County	Wyoming	Percentage Comparison
9 <sup>th</sup>		6.4%	
10 <sup>th</sup>	Information not available in Goshen County	13.3%	
11 <sup>th</sup>		21.0%	
12 <sup>th</sup>		21.3%	
9 <sup>th</sup> -12 <sup>th</sup>		15.3%	

Table 13. Percentage of Students That Said They Drove a Car or Other Vehicle When They Had Been Drinking Alcohol One or More Times during the past 30 Days (2001 - 2005 YRBS)

Grade	2001 County Data	2003 County Data	2005 County Data	Trend
9 <sup>th</sup>				
10 <sup>th</sup>				
11 <sup>th</sup>				
12 <sup>th</sup>				
9 <sup>th</sup> -12 <sup>th</sup>				

**Question 2.**

Based on Tables 10 and 12, how does student drinking and driving in your community compare to student drinking and driving across the state? Is your problem bigger, smaller, or about the same? Discuss the differences. From Tables 11 and 13, discuss whether the trends in your community are increasing, decreasing, remaining stable or are unclear? Discuss the differences.

Information is not available in terms of YRBS specific to Goshen County

## Alcohol-Related Car Crashes

Another targeted consequence of the misuse of alcohol for Wyoming's PF project is car crashes related to alcohol use.

For your community assessment, you will need to obtain information on the percentage of alcohol-related motor vehicle fatalities in your community by going to the following website:  
<http://www-fars.nhtsa.dot.gov/>

- From the website, select states, under the report list on the left hand side.
- Then click alcohol.
- The first table from this website is titled "Persons Killed, by State and Highest Blood Alcohol Concentration in Crashes;" from this table, click Wyoming which will give you the county rates.
- In Table 14 record the following three numbers under your county column. First report the number from the website column headed "total killed in alcohol-related crashes," second report the percentage from the website column headed "total killed in alcohol-related crashes," and third report the number from the website column headed "total killed."
- Using the look-up box just above the right hand corner of the website table, change the year and repeat the previous step until you have recorded all the annual information in Table 14.
- To obtain the percentage from 2000 to 2005, you will need to sum the number of alcohol-related fatalities across the listed years, and also sum the total number of fatalities across the listed years. To obtain the percentage, simply divide the total number of alcohol-related fatalities in your county by the total number of crash fatalities, and then multiply by 100.
- Under the percentage comparison column use a "+" if your county percentage is higher than the Wyoming percentage, use "-" if your county percentage is lower than the Wyoming percentage, and use "=" if the percentages are about the same.

Table 14. Percentage of Alcohol-Related Fatalities

Year	County			Wyoming	Percentage Comparison
	# that were Alcohol- Related	Percent Alcohol- Related	Total # Killed	Percent	
2000	0	0	1	30%	-
2001	1	22	6	44%	-
2002	3	60	5	38%	+
2003	1	50	2	38%	+
2004	1	37	3	36%	+
2005	0	0	0	38%	-
2000-2005	6	35	17	38%	-

- To complete Table 15 you will need to return to the [state alcohol rates](#) by either clicking the back button on your web browser or by repeating the first bulleted steps above.

- After returning to the state rates, scroll down to the table titled, “Drivers Involved in Fatal Crashes, by State and Blood Alcohol Concentration of the Driver.” Then click on the Wyoming link within that table to get to the county level results.
- For your county, record the following results in Table 15:
  - First report the number and percent listed under “Any Alcohol (BAC=0.01+).”
  - Second report the number from the column headed “Total Drivers Involved in Fatal Crashes.”
- Using the look-up box just above the right hand corner of the website table, change the year and repeat the previous step until you have recorded all the annual information in Table 15.
- To obtain the percentage from 2000 to 2005, you will need to sum the number of drivers with BAC levels greater than 0.01, and sum the total number of drivers involved in fatal crashes across the listed years. To obtain the percentage, divide the number of drivers who had been drinking by the total number of drivers who had been involved in a fatal crashes, then multiply by 100.
- Under the percentage comparison column use a “+” if your county percentage is higher than the Wyoming percentage, use “-” if your county percentage is lower than the Wyoming percentage, and use “=” if the percentages are about the same.

**Table 15. Percentage of Drivers Involved in Fatal Crashes That Have Had a Drink**

Year	County			Wyoming	Percentage Comparison
	# with BAC ≥ 0.01	Percent Alcohol- Related	Total # Involved in Fatal Crashes	Percent	
2000	1	100	1	22%	+
2001	1	17	7	31%	-
2002	3	50	6	28%	+
2003	1	37	3	26%	+
2004	1	22	5	26%	-
2005	0	0	0	31%	-
2000-2005	7	32	22	28%	+

To complete Tables 16 and 17 you will need to obtain information on the number and rate of alcohol-related crashes from 2002 to 2005. Like the previous tables in the workbook, you will need to compile numbers from several annual reports and then calculate the percentage across all the requested years. The following directions will help explain how to do this.

- In your internet web browser go to the following website:  
<http://dot.state.wy.us/Default.jsp?sCode=hwyrcr>.
- Click on the year in which you are interested on the right hand side.
- Click the link titled “Alcohol and Wyoming Crashes.”
- On approximately page number 114 there is a table titled “Alcohol Involved Fatal Crashes.”
- In Table 16 record the number of alcohol-related fatalities for your county.
- In Table 17 record the number of alcohol-related crashes for your county.

- For 2002-2005 sum all the years together.
- For information on county population see Appendix A (Table A) of this workbook, and use these figures for county population.
- To work out the rate per 100,000 population, divide the number of county arrests for the year(s) by the county population for those years and multiply by 100,000.
- Under the rate comparison column use a “+” if your county rate is higher than the Wyoming rate, use “-” if your county rate is lower than the Wyoming rate, and use “=” if the rates are about the same.

**Table 16. Alcohol-Related Fatalities**

Year	Number of County Fatalities	County Population	Rate per 100,000 Population	Number of Wyoming Fatalities	Rate per 100,000 Population	Rate Comparison
2002	4	12290	32.55	58	11.62	+
2003	1	12237	8.17	50	9.96	-
2004	1	12286	8.14	53	10.48	-
2005	0	12243	0	54	10.60	-
2002-2005	6	49056	12.23	215	10.66	+

**Table 17. Alcohol-Related Fatal Crashes**

Year	Number of County Fatal Crashes	County Population	Rate per 100,000 Population	Number of Wyoming Fatal Crashes	Rate per 100,000 Population	Rate Comparison
2002	4	12290	32.55	53	10.62	+
2003	1	12237	8.17	43	8.57	-
2004	1	12286	8.14	50	9.88	-
2005	0	12243	0	51	10.01	-
2002-2005	6	49056	12.23	197	9.77	+

To complete Tables 18 and 19, you will be using the same website:

<http://dot.state.wy.us/Default.jsp?sCode=hwycr>. The following directions explain how to obtain the needed information about Alcohol-Related Injury Crashes, and Alcohol-Related Property Crashes.

- After going to the website listed above, click the year in which you are interested.
- Click on the link about “Alcohol Involved Injury Crashes.”
- On approximately page number 125 there is a table titled “Alcohol Involved Injury Crashes.”
- In Table 18 record the number of alcohol-related injury crashes for your county.
- To complete Table 19 select alcohol-involved PDO (property damage only) crashes and from about page 137 find your county’s number of alcohol-related property crashes and record those numbers in Table 19.
- For both tables sum 2003-2005 together.
- For information on county population see Appendix A (Table A) of this workbook and use these figures for county population.
- To work out the rate per 100,000 population, divide the number of county arrests for the year(s) by the county population for those years and multiply by 100,000.

- Under the rate comparison column use a “+” if your county rate is higher than the Wyoming rate, use “-” if your county rate is lower than the Wyoming rate, and use “=” if the rates are about the same.

Table 18. Alcohol-Related Injury Crashes

Year	# of County Injuries	County Population	Rate per 100,000	# of Wyoming Injuries	Rate per 100,000	Rate Comparison
2003	12	12237	98.06	471	93.84	+
2004	11	12286	89.53	422	83.42	+
2005	11	12243	89.85	493	96.80	-
2003-2005	34	36766	92.48	1,386	91.36	+

Table 19. Alcohol-Related Property Crashes

Year	# of County Property Crashes	County Population	Rate per 100,000	# of Wyoming Property Crashes	Rate per 100,000	Rate Comparison
2003	11	12237	89.89	508	101.21	-
2004	5	12286	40.7	473	93.50	-
2005	9	12243	73.51	576	113.10	-
2003-2005	25	36766	67	1,557	102.63	-

### Other Local Data

Feel free to consider and analyze other local data that will help identify and detail problems around the consequences of alcohol and motor vehicles. For example, you may have information from local surveys, or you may know about certain trouble spots. If you have other local data describe the results here.

### Question 3.

Based on Tables 14 through 19 and your local level data, how do alcohol-related car crashes in your community compare to alcohol-related car crashes across the state? Is your problem bigger, smaller or about the same? Discuss the differences.

**Based on data from tables 14-17 Goshen county rates higher than the state average in the majority of years. This would indicate a significant problem with alcohol and driving for Goshen county.**

**\* it is important to note that there is concern regarding the statistics reported for the year 2005 regarding fatal accidents in Goshen County, many individuals participating in this research have personal experience with loss as a result of an accident in the year 2005. The numbers can't possibly be 0 across the board for that year.**

**As far as the property damage and alcohol, we are lower than state average. The coalition knows from participating in the Town Hall meetings and personal interviews with a number of individuals that these statistics are not accurate. Once again, the population spread out over large amounts of land throughout the county allows property damage to go unnoticed and many do not file reports on property damage because they feel it is too much trouble.**

## Alcohol Dependence and Abuse

Consider Table 20 below showing the rate by county of residence for treatment admissions for alcohol as the primary or secondary drug. This data comes from the Wyoming Mental Health and Substance Abuse Services Division (MHSASD) for Fiscal Year 2005. Those counties at the top of Table 20 have the largest rates. The Wyoming rate has been included in the table and is shaded to provide a comparison. Anything above this shaded line is higher than the state average and anything below this shaded line is lower than the state average.

**Table 20. Rate of Referrals per 100,000 Population for Alcohol Treatment in Wyoming by County of Referral (MHSASD, 2005)**

County	Number Referred	County Population	Rate per 100,000 Population
Platte	184	8,619	2134
Fremont	769	36,491	2107
Hot Springs	91	4,537	2006
Teton	366	19,032	1923
Sheridan	506	27,389	1847
Albany	536	30,890	1735
Washakie	134	7,933	1689
Laramie	1,299	85,163	1525
Campbell	570	37,405	1524
Natrona	1,052	69,799	1507
Sublette	101	6,926	1458
Wyoming	7,358	509,294	1445
Carbon	219	15,331	1428
Sweetwater	509	37,975	1340
Goshen	159	12,243	1299
Big Horn	146	11,333	1288
Niobrara	28	2,286	1225
Weston	79	6,671	1184
Converse	130	12,766	1018
Lincoln	122	15,999	762

Uinta	129	19,939	647
Crook	39	6,182	630
Park	140	26,664	525

### Other Local Data

Feel free to consider and analyze other local data that will help identify and detail problems around the consequences of alcohol dependence and abuse. For example, you may have information from local surveys, or you may have information from treatment facilities in your communities. If you have other local data describe the results here.

#### Question 4.

Based on Table 20 and your local level data, how does alcohol dependence and abuse in your community compare to alcohol dependence and abuse across the state? Is your problem bigger, smaller or about the same? Discuss the differences.

Based on the data from table 20, Goshen County has a smaller problem than the state overall, however, it is the consensus of the Community Coalition members ( who are professionals dealing with the community on a daily basis ranging from youth to adult) Goshen County has a much bigger problem. Adults and youth both participate regularly in the misuse of alcohol, but they go with out being reported or being caught, so the statistics are once again inaccurate.

### Final Consequences Question

#### Question 5.

Based on your answers to Questions 1 through 4, what are your community's major concerns surrounding the consequences of the misuse of alcohol? Justify your decision.

The primary concern of the professionals involved with the Coalition is the inaccuracy of the reporting, the reporting requirements were not made available for this research, so there is not speculation on where the error is occurring, just a professional note based on daily community interaction that the statistics to support all that is actually taking place surrounding the misuse of alcohol in Goshen County. In comparing statistics gathered from state reports, responses from Coalition team members and information gathered from personal interviews and individual surveys, there are a number of other major concerns as well surrounding the consequences of the misuse of alcohol.

Individuals, both professional and non-professional, want to see consequences surrounding the misuse of alcohol include (but not limited to):

- More severe and consistent penalties with DWI
- Social hosting without alcohol to encourage change in community norms
- More stringent laws regarding adults contributing to minors

## Consumption

This section looks at consumption data and will help you identify any consumption concerns in your community. Consumption data includes information about the percentage or number of underage people who drink alcohol, the percentage or number who engage in binge drinking (five or more drinks in one sitting), or the percentage or number of adults who engage in heavy drinking (more than 60 drinks a month for males, and more than 30 drinks a month for females).

### Underage drinking

Complete Tables 21 through 24 using the Prevention Needs Assessment (PNA) data for your county. To obtain your county's 2006 Prevention Needs Assessment (PNA) report go to the following website: <http://www.uwyo.edu/wysac/HealthEducation/PNA/Reports.aspx>

- After going to the website, click the link titled “open” next to your county’s name.
- After downloading the report, go to Appendix A (Table 12-Table 15), and record the 30-day substance use alcohol data for 2006 in Table 21, and binge drinking rates for your community for 2006 in Table 23.
- To obtain your county’s quartile, find Table 1 in the report (should be around page 10), find alcohol under 30-day substance use and record the quartiles for each grade level in Table 21; next find binge drinking under heavy substance use and record the quartiles for each grade level in Table 23 of this workbook. Note, if you are in the first quartile then your rate is lower than 75% of the other counties in Wyoming. If you are in the 4<sup>th</sup> quartile then your rate is in the top 25% of all counties in Wyoming.
- Under the percentage comparison column in Tables 21 and 23 use a “+” if your county percentage is higher than the Wyoming percentage, use “-” if your county percentage is lower than the Wyoming percentage, and use “=” if the percentages are about the same.
- Using information from Appendix A in your County’s PNA Report, record in Table 22, the 30-Day Alcohol Use rates for 2001, 2004, and 2006. Record the Binge Drinking rates in 2001, 2004 and 2006 in Table 24. In both tables, record whether the time trend is increasing using a “+” symbol, a “-” symbol for a decreasing trend, a “=” symbol for a stable trend, and a “?” for an unclear trend.

Table 21. Percentage of Students Who Have Had a Drink in the past 30 Days (2006 PNA)

Grade	County	Wyoming	County Quartile	Percentage Comparison
6 <sup>th</sup>	7.5	6.7%	3	+
8 <sup>th</sup>	30.6	27.1%	3	+
10 <sup>th</sup>	49.3	39.9%	4	+
12 <sup>th</sup>	55.8	48.2%	4	+

Table 22. Percentage of Students Who Have Had a Drink in the past 30 Days (2001 - 2006 PNA)

Grade	2001 County Data	2004 County Data	2006 County Data	Trend
-------	------------------	------------------	------------------	-------

6 <sup>th</sup>	6.2	9.7	7.5	No meaningful change
8 <sup>th</sup>	28.8	24.6	30.6	Minor increase
10 <sup>th</sup>	39.3	44.7	49.3	Minor increase
12 <sup>th</sup>	55.8	60.2	58.9	No meaningful change

Table 23. Percentage of Students Who Have Had More Than Five Drinks in a Row in the past Two Weeks (2006 PNA)

Grade	County	Wyoming	County Quartile	Percentage Comparison
6 <sup>th</sup>	3.6	4.1%		-
8 <sup>th</sup>	12	16.2%		-
10 <sup>th</sup>	33.8	25.2%		+
12 <sup>th</sup>	39.3	32.3%		+

Table 24. Percentage of Students Who Have Had More Than Five Drinks in a Row in the past Two Weeks (2001- 2006 PNA)

Grade	2001 County Data	2004 County Data	2006 County Data	Trend
6 <sup>th</sup>	7	8.5	3.6	Decrease
8 <sup>th</sup>	29	20	12	Decrease
10 <sup>th</sup>	34.2	35.3	33.8	No sig. change
12 <sup>th</sup>	37.8	48.9	39.3	decrease

To provide another set of estimates for your county, the Youth Risk Behavior Survey (YRBS) data may often be obtained from your local schools and/or school districts. If you can obtain this information you will want to include this in Tables 25 through 28.

Table 25. Percentage of High School Students Who Have Had a Drink in the past 30 Days (2005 YRBS)

Grade	County	Wyoming	Percentage Comparison
9 <sup>th</sup>	Information not available in Goshen County	33.7%	
10 <sup>th</sup>		45.7%	
11 <sup>th</sup>		48.6%	
12 <sup>th</sup>		55.0%	
9 <sup>th</sup> -12 <sup>th</sup>		45.4%	

Table 26. Percentage of High School Students Who Have Had a Drink in the past 30 Days (2001 - 2005 YRBS)

9 <sup>th</sup> -12 <sup>th</sup>				

### Other Local Data

Feel free to consider and analyze other local data that will help identify and detail problems around underage drinking. A few examples include, (a) your community may have its own specific alcohol survey involving underage drinking, or (b) your community may want to consider college data like the National College Health Assessment (NCHA) data if there is a community college or university in your community, or (c) data from alternative schools if there is one in your community. If you have other local data describe the results here.

#### Question 6.

Based on Tables 21 and 25, and your community's own local data, how does student 30-day use of alcohol in your community compare to student 30-day use of alcohol across the state? Discuss the differences. Is your problem bigger, smaller, or about the same? From Tables 22 and 26, discuss how the trends in your community are increasing, decreasing, remaining stable or unclear? Discuss the differences.

Not able to provide information on data tables related to YRBS

Based on tables 21 and 25, our community has a larger average than the state for these alcohol related issues. Table 24 hold a collection of data that once again remains questionable in the eyes of the professionals of the Coalition who participate daily with a number of youth and adults in the community and are witness to first-hand participation in the concept of "drinking to get drunk" on a regular basis. Tables 22-26 indicate that our trend is decreasing. These again are statistics heavily questioned by the Coalition and several community members do to recent increases in youth being cited for a number of illegal activities. Often illegal activities in Goshen County are associated with alcohol misuse according to our local Sherriff's Department.

#### Question 7.

Based on Tables 23 and 27, along with your community's own local data, how does student binge drinking in your community compare to student binge drinking across the state? Discuss the differences. Is your problem bigger, smaller, or about the same? From Tables 24 and 28, discuss how the trends in your community are increasing, decreasing, remaining stable or unclear? Discuss the differences.

There is no data available for Goshen County based on tables requiring information from the YRBS.

## Adult drinking

Consider the following two tables for adult binge drinking and heavy drinking rates taken from the 2001-2005 Behavioral Risk Factor Surveillance Survey (BRFSS). To compare individual counties to Wyoming as a whole, Wyoming has been included in the tables and is

shaded. Anything above this shaded line is higher than the state average and anything below this shaded line is lower than the state average.

Table 29. Percentage of Adults (18 Years and Older) Who Report Binge Drinking, Defined as Having Five or More Drinks in a Row in the past 30 Days (2001-2005 BRFSS)

County	Percentage
Albany	23.0%
Sublette	21.9%
Teton	21.8%
Campbell	19.9%
Sweetwater	19.2%
Niobrara	16.9%
Laramie	16.8%
Wyoming	16.5%
Johnson	16.4%
Crook	16.3%
Big Horn	15.8%
Natrona	15.8%
Converse	15.4%
Carbon	15.3%
Fremont	14.7%
Hot Springs	14.4%
Park	14.4%
Goshen	13.9%
Washakie	13.1%
Platte	12.9%
Weston	12.9%
Sheridan	12.8%
Lincoln	12.6%
Uinta	12.4%

Table 30. Percentage of Adults (18 Years and Older) Who Report Heavy Drinking, 60 Drinks in the past 30 Days for Men and 30 Drinks in the past 30 Days for Women (2001-2005 BRFSS)

County	Percentage
Teton	9.1%
Albany	8.7%
Sublette	7.7%
Converse	6.0%
Campbell	5.7%
Crook	5.7%
Johnson	5.5%
Natrona	5.5%
Sweetwater	5.4%
Carbon	5.3%
Fremont	5.2%
Niobrara	5.2%
Wyoming	5.2%
Park	4.9%
Laramie	4.5%
Platte	4.3%
Big Horn	4.1%
Lincoln	3.9%
Washakie	3.9%
Weston	3.7%
Goshen	3.3%
Sheridan	3.2%
Uinta	3.2%
Hot Springs	3.0%

## Other Local Data

Feel free to consider and analyze other local data that will help identify and detail problems around adult drinking. For example, your community may have its own specific alcohol survey, or your community may want to consider college surveys like the National College Health Assessment (NCHA) data if there is a community college or university in your community. If you have other local data describe the results here.

### Question 8.

Based on Tables 29 and 30, along with your community's other local data, how does adult binge drinking, and adult heavy drinking in your community compare to adult binge drinking, and adult heavy drinking across the state? Is your problem bigger, smaller, or about the same? Discuss the differences.

The consensus of the members of the Coalition reporting all agree that the tables indicate that we are lower than the state average, but the data is not accurate. It is believed that the problem of binge drinking is much more serious than the data indicates.

A number of members responding to this questions also mention that the data is not accurate because there is not an alternative to binge drinking. The community does not offer alternative recreation so binge drinking occurs more often than not, and certainly more than the tables show.

## Final Consumption Question

### Question 9.\$

Based on the consumption data analyzed here and on your answers to Questions 6 through 8, what are your community's major concerns surrounding the problem of underage drinking, adult binge drinking, and adult heavy drinking? Justify your decision.

The number one concern of the Coalition and community members in general is that the information that is being reported for statistical analysis is inaccurate and does not reflect the true problems faced by Goshen County.

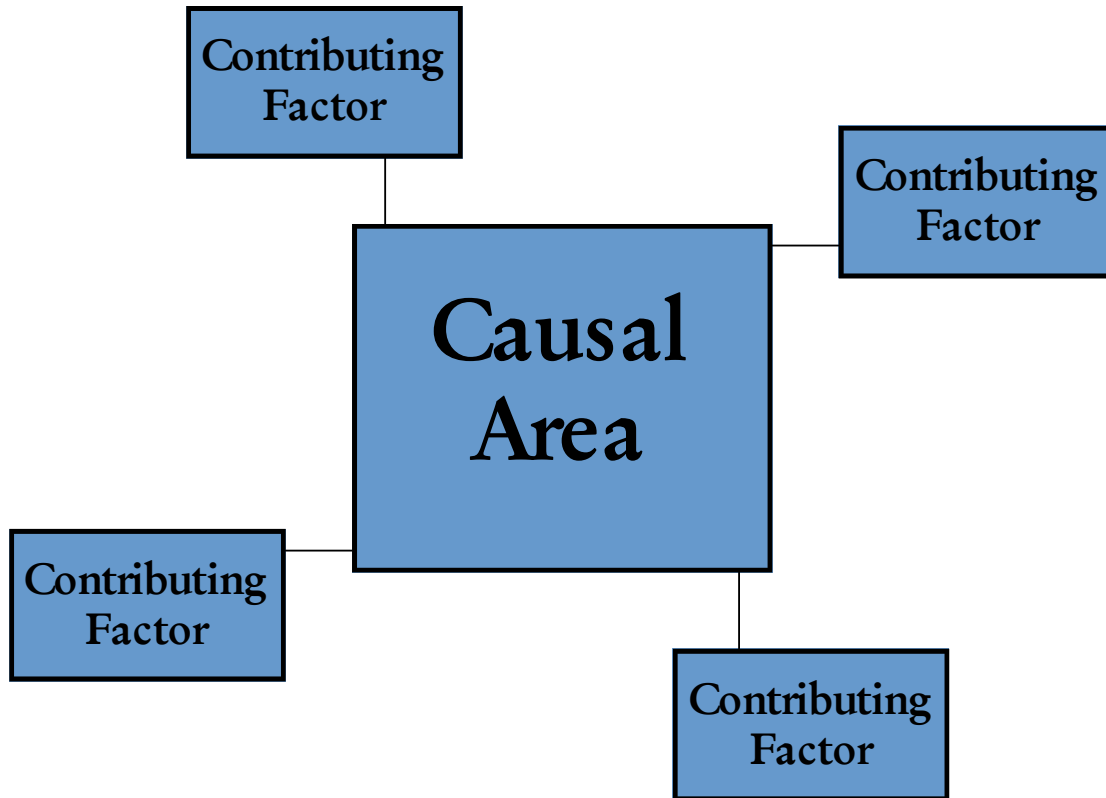

Among other concerns that would be considered high-priority are:

- Social acceptance of youth alcohol consumption
- Concern with alcohol use on campus (EWC)
- Adult binge drinking being related directly to underage binge drinking.( Alcohol dependence develops early when started at the age of 15 or younger)
- Social acceptance of adult binge drinking throughout the community
- Academic failures and school drop-out rates
- Risky sexual behaviors, increase in teen pregnancies in Goshen County

- Increase in criminal behaviors (assault, domestic violence)

Goshen County currently faces a high percentage of individuals participating in the above on a regular basis, some reported, some unreported. No matter which category they fall into, the effects are taking a heavy toll on the community.

## Causal Areas

## **Task Two: Gather Data on Six Causal Areas**

### **Retail Availability**

#### **Liquor Licenses Per Capita**

The most fundamental way to understand retail availability is the number of opportunities people have to buy alcohol. Consider the following table which lists the number of liquor licenses issued in each county. Counties are ordered based on their rates of liquor licenses per 100,000 population over the age of 14. The population of those 14 years and older is used to be consistent with research done by the National Institute on Alcohol Abuse and Alcoholism regarding sales per gallon of ethanol. To compare individual counties to Wyoming as a whole, Wyoming has been included in the table and is shaded. Anything above this shaded line has rates that are higher than the state average and anything below this shaded line have rates that are lower than the state average. This table includes all liquor license types except special event and malt beverage licenses. The included license types are:

- Retail liquor licenses
- Restaurant liquor licenses
- Limited liquor licenses
- Resort licenses
- Microbrewery permits
- Winery permits

Table 31. Liquor Licenses per 100,000 Population over 14 Years Old (2005 Department of Revenue and US Census Bureau)

County	Liquor Licenses	Population	Rate per 100,000 Population
Teton	102	16396	622.10
Niobrara	11	1991	552.49
Sublette	32	5851	546.92
Crook	28	5268	531.51
Carbon	61	13006	469.01
Hot Springs	18	3987	451.47
Johnson	27	6644	406.38
Platte	29	7352	394.45
Weston	22	5771	381.22
Big Horn	33	9339	353.36
Lincoln	46	13113	350.80
Park	79	22887	345.17
Washakie	23	6700	343.28
Fremont	96	30015	319.84
Converse	34	10674	318.53
Goshen	32	10366	308.70
Sheridan	69	23250	296.77
Uinta	45	15809	284.65
Wyoming	1185	423760	279.64
Sweetwater	82	30887	265.48
Albany	67	26843	249.60
Natrona	108	57611	187.46
Campbell	49	30244	162.02
Laramie	90	69756	129.02

**Question 10.**

Based on Table 31, how does the number of liquor licenses per person in your community compare to the number of liquor licenses per person across the state? Is your rate bigger, smaller, or about the same? Discuss the differences.

**Those reporting all agree that the information in table 31 is accurate. Our number of liquor licenses are above state average.**

**Side note on this topic:**

**Liquor licenses for private parties are typically not reported because local liquor establishments cater those events and already have a license. This is important to note because the numbers are misleading, and this is a large causal factor in minors obtaining alcohol without incidence.**

## Compliance Check Failure Rate

The selling of alcohol to minors can contribute to the misuse of alcohol in your community. One measure of this is the failure of compliance checks by retail outlets. Consider the following table that has been ordered based on compliance check failure rate. Wyoming's rate has been included in Table 32 and is shaded as a point of comparison. Anything above this shaded line is higher than the state average and anything below this shaded line is lower than the state average.

Table 32. Percentage of Liquor License Holders That Failed a Compliance Check (Wyoming Association of Sheriffs and Chiefs of Police, 2006)

County	Number visited	Percentage
Carbon	16	37.50%
Hot Springs	16	37.50%
Platte	9	33.33%
Uinta	71	26.76%
Albany	65	26.15%
Goshen	38	23.68%
Teton	85	23.53%
Fremont	67	22.39%
Laramie	174	21.84%
Sweetwater	51	21.57%
Wyoming	1073	20.41%
Campbell	83	18.07%
Natrona	186	17.74%
Lincoln	69	14.49%
Converse	30	13.33%
Park	104	12.50%
Big Horn	9	0%
Crook	Did not conduct checks in 2006	
Johnson	Did not conduct checks in 2006	
Niobrara	Did not conduct checks in 2006	
Sheridan	Did not conduct checks in 2006	
Sublette	Did not conduct checks in 2006	
Washakie	Did not conduct checks in 2006	
Weston	Did not conduct checks in 2006	

**Question 11.**

Based on Table 32, how does your community's alcohol compliance failure rate compare to the alcohol compliance failure rate across the state? Is your rate bigger, smaller, or about the same? Discuss the differences.

**The table seems to be accurate in noting that Goshen County is above state average in liquor compliance failure rates. The number of compliance failures seems to have increased in the recent past according to law enforcement officials who recently conducted liquor compliance checks at local liquor establishments.**

## Percentage of Drive-up Liquor Windows

The percentage of drive-up liquor windows in your community can contribute to alcohol-related concerns because drive-up liquor windows make alcohol more easily obtainable and may encourage drinking and driving. This section will help you determine both the number of establishments with drive-up liquor windows and also what percentage of the liquor license holders in your community have them. The first step is to list all the liquor licenses by name in your community. A list of the liquor license holders can be obtained from the City Clerk's Office for establishments within municipalities and from the County Clerk's Office for establishments in unincorporated county areas. Compile these lists in Table 33 of this workbook, by recording the name of the establishment in the first column. Next, find out how many of these establishments have drive-up liquor windows and in the column headed drive-up liquor window write yes if there is a drive-up liquor window and no if there is not. You may already know if an establishment has a drive-up liquor window or not, in which case simply record a yes or a no immediately. Those establishments which are not known may require a visit or a phone call to determine whether or not they have a drive-up liquor window. Based on this research, calculate the percentage of establishments in your community that have a drive-up liquor window. This data must be collected and submitted to Dr. Rodney Wambeam at WYSAC (rodney@uwyo.edu) no later than April 30, 2007. Data for all 24 grantee communities will be compiled and returned to each grantee no later than May 15, 2007 in order for you to compare your results to the rest of the state.

**Table 33. Drive-up Liquor Windows and Liquor Licenses in your Community**

Establishment	Drive-up liquor window
State Line Oasis	1, but not in use
Long Branch Saloon	0
Dead Horse Saloon	0
Yoder Bar	0
Hi Way Package	1
Trail Bar	1
Bronco	0
Tote-Away	1
Spirits of 77	1
Frontier Mart	1

Corner Bar	1
Bob's Bar	1

Community drive-up liquor window percentage = 58.3%

State drive-up liquor window percentage = 23.2%

#### Question 12.

Based on Table 33, how does your community's drive-up liquor windows percentage compare to the drive-up liquor windows percentage across the state? Is your percentage bigger, smaller, or about the same? Discuss the differences.

Goshen County has a considerably higher than state average for the number of drive-up liquor windows within the community. The numbers seem to reflect what the Coalition maintains, Goshen County has a large problem with alcohol misuse that has developed over generations. The fact, as pointed out by members of the Coalition, is that this high percentage of drive-up windows is a direct result of supply and demand. It directly reflects the contribution of the attitudes in the community in relation to the supply/availability of alcohol.

### Other Local Data

Feel free to consider and analyze other local data that will help you better understand how, and to what extent retail availability may influence alcohol-related problems in your community. For example, you may have data on the density of retail outlets, or anecdotal data on specific outlets that are known for selling to minors, or intoxicated persons. You may also want to consider local laws surrounding retail availability. If you have other local data describe the results here.

## Retail Availability Questions

### Question 13.

Based on information gathered about liquor licenses per 100,000 population 14 years and older, alcohol compliance check failure rates, drive-up liquor window percentage, and other local data, what are the concerns around retail availability that might contribute to the misuse of alcohol and its consequences in your community? Justify your decision.

The preponderance with availability and the number of retail drive-up windows, coupled with the number of establishments who fail compliance checks regularly, derives great concern in Goshen County. The demand for easy accessibility of alcohol by adults is being efficiently met and the ability for youth to obtain alcohol without significant consequences has been made relatively simple.

The laws that are in place that current limit local law enforcement from effectively enforce alcohol related laws also contribute to the increase in the misuse of alcohol throughout Goshen County.

### Question 14.

Based on the above considerations, to what degree does your CAC believe retail availability is impacting the misuse of alcohol and its consequences in your community? Justify your decision.

(place an "x" next to a number from 0 to 10)

No impact					Major impact				
0	1	2	3	4	5	6	7	8	9 10

## Criminal Justice

The next causal area researched in this needs assessment has to do with the criminal justice system. Again, this will mean some original research and the submission of data to WYSAC for state level analysis.

### Conviction Rates

To understand how the criminal justice system in your community addresses the misuse of alcohol in your community, you will need to visit the clerk of court for all circuit courts in your community. Each clerk should be able to provide you a listing of the 2006 convictions for the alcohol-related crimes listed below. You will need to fill in Table 34 and return to WYSAC a copy of the list provided by the clerk of circuit court. WYSAC will in turn use that information to provide you with the conviction rates across Wyoming for each of the different types of crimes.

Table 34. Percentage of Convictions for Alcohol-Related Crime within the Circuit Court

Alcohol-related Crime	# of Filings	# Found Guilty	Dismissed by Prosecution	Dismissed	Deferred	Not Guilty	Pending
Minor in Possession	18	17	1	0	0	0	0
Adult DUI (BAC>0.08)	12	12	0	0	0	0	0
Juvenile DUI (BAC > 0.02)	4	4	0	0	0	0	0
DUI to a degree	7	6	0	0	0	0	1-Bound over
DWUI 2nd	11	10	1	0	0	0	1-Amended
Open Container	10	6	3	0	0	0	1-forfeiture
Other	15	12	2	0	1	0	0
Total	77	67	7	0	1	0	0

- To obtain the percentage you will need to sum the number of filings, and also sum the number of guilty convictions. To obtain the percentage, simply divide the total number of guilty convictions in your county by the total number of filings, and then multiply by 100.

Community conviction percentage = 87%

State conviction percentage = 74.1%

After gathering data from each clerk of court submit a copy of the list and your completed Table 34 to Dr. Rodney Wambeam at WYSAC (rodney@uwyo.edu) no later than April 30,

2007. WYSAC researchers will calculate the conviction percentage statewide for comparison to your own conviction percentage. Data for all 24 grantee communities will be returned to each grantee no later than May 15, 2007 in order for you to compare your results to the rest of the state.

**Question 15.**

Based on the data in Table 34, how does your community's conviction rate for alcohol-related crimes compare to the alcohol-related conviction rate across the state? Is your rate bigger, smaller, or about the same? Discuss the differences.

Goshen County's conviction rate for alcohol-related crimes is higher than the state average. For those instances where individuals are actually caught and cited for their crimes, the Coalition is pleased with the judicial system for their active participation in working against the misuse of alcohol.

Of concern with the members of the Coalition and other community members is the number of individuals who never go to court.

## Wyoming Alcohol Use Issues Survey 2006

In 2006, the Wyoming Department of Health Substance Abuse Division, the Wyoming Association of Sheriffs and Chiefs of Police, and the Wyoming Department of Transportation funded an alcohol opinion survey. Within that survey, participants were asked about how strongly they felt underage drinking laws should be enforced, and whether adults who provide alcohol to minors should be prosecuted. The results for each county are reproduced in Tables 35 and 36. Counties have been ranked according to how strongly they disagree or somewhat disagree with the enforcement of the laws

Table 35. Percentage of Survey Participants Who Agreed or Disagreed with the Statement: “Local Law Enforcement Should Strongly Enforce Laws Regulating Alcohol Use by Youth under Age 21” (Wyoming Alcohol Use Issues Survey 2006)

County	Somewhat or strongly agree	Neither agree nor disagree	Somewhat or strongly disagree
Hot Springs	93.2%	1.0%	5.9%
Converse	93.9%	0.5%	5.7%
Platte	92.5%	1.9%	5.7%
Niobrara	92.4%	1.9%	5.7%
Albany	92.2%	2.5%	5.4%
Teton	93.3%	1.3%	5.3%
Sublette	93.9%	1.0%	5.1%
Fremont	92.7%	2.3%	5.0%
Campbell	93.7%	1.5%	4.9%
Sheridan	93.8%	1.4%	4.7%
Natrona	92.9%	2.5%	4.5%
Uinta	94.3%	1.4%	4.2%

Converse	94.7%	2.9%	2.4%
Big Horn	98.0%	0.5%	1.5%

### Question 16.

Based on Tables 35 and 36, are there any concerns in your community regarding the use of alcohol by minors, or the supplying of alcohol to minors? Are your concerns bigger, smaller, or about the same? Discuss the differences.

The tables show that Goshen County is highly concerned about the use of alcohol by minors and the supplying of alcohol to minors.

The information that has been gathered through Town Hall meetings and personal interviews with law enforcement, school officials, etc. indicate that a high percentage of people in the county do not “practice what the preach.”

\*They want accountability for someone else, not themselves.

\* Availability of alcohol to minors is very strong

\* Kids in this county do not have a problem obtaining alcohol

## Out of Home Placements

Consider Table 37 that has been ordered based on the average rate per 100,000 population for the number of children in 2005 that were in out of home placements. Wyoming’s rate has been included in Table 37 and is shaded as a point of comparison. Anything above this shaded line is higher than the state average and anything below this shaded line is lower than the state average.

Table 37. Average Rate of out of Home Placements during 2005 (WYCAPS, 2005)

	Average Number	Population under 18	Rate per 100,000 population
Fremont	220.0	8,636	2547.476
Hot Springs	17.5	784	2232.143
Platte	33.5	1,766	1896.942
Carbon	53.75	3,083	1743.432
Goshen	42.5	2,561	1659.508
Converse	44.0	2,858	1539.538
Sweetwater	139.50	9,344	1492.937
Laramie	244.75	20,085	1218.571
Wyoming	1343.50	114,321	1175.2
Natrona	186.0	16,126	1153.417
Campbell	99.0	9,549	1036.758
Sheridan	54.25	5,686	954.0978
Washakie	16.50	1,808	912.6106
Park	45.0	5,264	854.8632
Niobrara	3.5	418	837.3206
Weston	9.75	1,249	780.6245
Albany	36.75	5,114	718.6156
Uinta	36.50	5,553	657.3024
Sublette	7.75	1,484	522.2372

Crook	6.25	1,277	489.4283
Johnson	7.25	1,506	481.4077
Lincoln	16.0	3,969	403.1242
Teton	13.75	3,464	396.94
Big Horn	9.75	2,737	356.2294

## Average Juvenile Probation Cases

Consider Table 38 that has been ordered based on the average number of juvenile probation cases (rate per 100,000 people) for 2005. Wyoming's rate has been included in Table 38 and is shaded as a point of comparison. Anything above this shaded line is higher than the state average and anything below this shaded line is lower than the state average.

Table 38. Average Rate of Juvenile Probation Cases during 2005 (WYCAPS, 2005)

	Average Number	Population under 18	Rate per 100,000 population
Hot Springs	13.67	784	1743.197
Platte	29.58	1,766	1675.16
Laramie	280.40	20,085	1396.046
Goshen	34.67	2,561	1353.638
Fremont	97.75	8,636	1131.89
Sheridan	64.25	5,686	1129.968
Teton	38.83	3,464	1121.055
Sweetwater	97.83	9,344	1047.018
Washakie	18.58	1,808	1027.839
Converse	28.83	2,858	1008.864
Crook	12.75	1,277	998.4338
Park	52.25	5,264	992.5912
Wyoming	1096.06	114,321	958.7587
Albany	43.75	5,114	855.4947
Carbon	23.33	3,083	756.8386
Natrona	113.92	16,126	706.4161
Lincoln	28.0	3,969	705.4674
Big Horn	16.92	2,737	618.0733
Campbell	57.33	9,549	600.4119
Uinta	30.75	5,553	553.7547
Weston	5.25	1,249	420.3363
Johnson	4.92	1,506	326.4719
Niobrara	1.00	418	239.2344
Sublette	1.50	1,484	101.0782

### Question 17.

Based on Tables 37 and 38, are there any concerns in your community regarding out of home placements and juvenile probation cases? Are your concerns bigger, smaller, or about the same? Discuss the differences.

**The tables indicate that we are significantly higher in this area. We have a bigger problem than the state average, and the numbers should speak for themselves in this table.**

**Based on the professional positions that are held among those contributing information to this question they concur that alcohol plays a major role in dysfunctional families and at-risk situations in Goshen County.**

**\* Some believe that the high number of juvenile probation cases are again reflective of adolescents having nothing better to do with their time.**

## Key Law Enforcement Interviews

As part of this needs assessment you will need to conduct interviews of key law enforcement officers. You are encouraged to do at least one interview with the Chief of Police and one with the County Sheriff, but consider what interviews would be the most appropriate and informative for your community. You may also want to consider interviews with emergency room staff, school officials, or treatment facility administrators about their interactions with the justice system. A sample protocol for the law enforcement interviews and ideas on how to gather and analyze qualitative data from these interviews can be found in Appendix B.

## Officers Assigned to Alcohol-Related Issues

During the interviews with key law enforcement personnel you need to find out how many officers are assigned directly to alcohol-related issues and crimes. Questions about this appear on the interview protocol in Appendix B. Submit the data to Dr. Rodney Wambeam at WYSAC (rodney@uwyo.edu) no later than April 30, 2007. Once again, the data will be used to create state averages for comparison. Data for all 24 grantee communities will be returned to each grantee no later than May 15, 2007 in order for you to compare your results to the rest of the state. Use these numbers to answer the next question.

Law Enforcement Officers Assigned to Alcohol-Related Issues and Crime (County) = 0

There are six law enforcement officials assigned to the schools to do the DARE program.

Law Enforcement Officers Assigned to Alcohol-Related Issues and Crime (State) = 0

#### Question 18.

Based on your interviews with law enforcement officers and the number of officers in your community assigned specifically to alcohol-related issues, what efforts are your law enforcement agencies pursuing or not pursuing when it comes to the misuse of alcohol?

Goshen County does not currently have any law enforcement officer assigned specifically to alcohol-related issues. In this, we are no different from the rest of the State of Wyoming.

Goshen County does, however, have 6 officers assigned and trained to do the DARE program within Goshen County School District #1. The Coalition and other members of the community are aware that the DARE program is currently being evaluated for the possibility of becoming a Best Practice program.

Based on community interviews conducted by Coalition members for the purpose of this workbook, there is also a concern that the Chief of Police in Torrington does not believe that Torrington has a very serious problem with the misuse of alcohol. This contrasts sharply with other law enforcement professionals in the area, in that they believe there is large problem and not enough support or work force to effectively counter it.

### Other Local Data

Feel free to consider and analyze other local data that will help you better understand how, and to what extent criminal justice issues in your community may contribute to the misuse of alcohol and its consequences in your community. For example, you may have information on unique policies or strong enforcement of underage drinking laws in your community, or specific laws relating to your community. You may be able to assess information from your local drug courts, if you have one. If you have other local data describe the results here.

## Criminal Justice Questions

### Question 19.

Based on information gathered from alcohol conviction rates, alcohol use issues survey, out of home placements, juvenile probation cases, key law enforcement interviews, and officers assigned to alcohol-related issues, and other local data, what are the concerns around criminal justice that might contribute to the misuse of alcohol and its consequences in your community? Justify your decision.

The concerns have been covered in previous questions, but warrant being repeated and emphasized again to stress the challenges being faced in Goshen County.

- Inconsistent judgments between city and county courts
- More severe and consistent penalties with DWUI
- Social hosting without alcohol being served
- More stringent laws with adults contributing to minors
- More severe fines and penalties for all alcohol related crimes involving minors
- “Dry Sundays” and reduced hours with alcohol retail establishments
- Stringent regulations and discipline with school and work regarding alcohol use
- Academic failures and school drop-out rates
- General attitude of community that alcohol use is a “rite of passage” and an acceptable community norm
- Assigning law enforcement specifically to alcohol-related issues

### Question 20.

Based on the considerations in Question 19, to what degree does your CAC believe the concerns around criminal justice are contributing to the misuse of alcohol and its consequences in your community? Justify your decision.

(place an “x” next to a number from 0 to 10)

No impact					Major impact					
0	1	2	X3	4	5	6	7	8	9	10

Justification for rating is provided in the answer to Question #19

## Social Availability

Social availability includes the obtaining of alcohol from friends, associates, and family members, but it also refers to the availability of alcohol gatherings such as parties and other social events where the alcohol is provided as part of the event.

## Prevention Needs Assessment

The 2006 Prevention Needs Assessment (PNA) asked youth where they obtained and consumed their alcohol in some very specific questions. This data provides a starting point for understanding the social availability of alcohol for youth.

Complete Tables 39 and 40 below using the data from the 2006 PNA, available in Appendix D of this workbook. For smaller counties it may be appropriate to only consider 6th through 12th grades combined because those estimates tend to be more stable.

**Table 39. Percentage of Students Obtaining Their Last Drink of Alcohol from Six Different Sources (2006 PNA)**

Grade	Parent(s)	Parent of a Friend	Adult 21 or over	Someone under 21	Took It	Licensed Retailer
County 6 <sup>th</sup> Grade	63.6	0	18.2	0	18.2	0
Wyoming 6 <sup>th</sup> Grade	54.4%	7.2%	13.9%	11.0%	12.3%	1.2%
County 8 <sup>th</sup> Grade	27	12.2	21.6	21.6	17.6	0
Wyoming 8 <sup>th</sup> Grade	33.7%	9.7%	20.6%	20.0%	14.5%	1.5%
County 10 <sup>th</sup> Grade	16.5	7.2	47.4	21.6	6.2	1
Wyoming 10 <sup>th</sup> Grade	18.7%	8.2%	36.8%	26.9%	7.2%	2.2%
County 12 <sup>th</sup> Grade	8.9	6.3	68.4	11.4	1.3	3.8
Wyoming 12 <sup>th</sup> Grade	12.0%	4.5%	52.0%	22.6%	3.1%	5.9%
County 6 <sup>th</sup> - 12 <sup>th</sup> Grade	18.6	8	46.2	17.5	8.1	1.6
Wyoming 6 <sup>th</sup> - 12 <sup>th</sup> Grade	26.6%	7.6%	32.8%	21.3%	8.9%	2.8%

**Table 40. Percentage of Students Who Attended a Gathering with Large Amounts of Available Alcohol (2006 PNA)**

Grade	County	Wyoming
6 <sup>th</sup> Grade	16.9%	19.5%
8 <sup>th</sup> Grade	34.1%	32.3%
10 <sup>th</sup> Grade	60.3%	48.5%
12 <sup>th</sup> Grade	63%	62.2%
6 <sup>th</sup> – 12 <sup>th</sup> Grade	44%	37.3%

**Question 21.**

Based on Tables 39 and 40, where are youth in your community getting their alcohol, and are they attending gatherings with large amounts of alcohol available? How do these rates compare to the rates across the state? Is your community higher, lower, or about the same? Discuss the differences.

According to the tables, we have a large problem with youth getting alcohol from both parents and friends over the age of 21. They seem to be attending more gatherings where large amounts of alcohol are available as soon as they are in high school. The tables show that Goshen County is below average with most 6<sup>th</sup>-8<sup>th</sup> graders, however we are above state averages for those attending high school.

## Wyoming Alcohol Use Issues Survey 2006

In 2006, the Wyoming Department of Health Substance Abuse Division, the Wyoming Association of Sheriffs and Chiefs of Police, and the Wyoming Department of Transportation funded an alcohol opinion survey. Within that survey, the question that was specific to social availability is, "Whether or not you are a parent, at what age would you allow your child to first drink alcohol other than a few sips?" The results for each county are reproduced in Table 41.

Table 41. Percentage of Adult Respondents Who Would Allow Their Child to First Drink Alcohol by Age Category (2006 Alcohol Use Issues Survey)

County	15 or younger	16 to 17	18 to 20	21 and over	Never	Total for under 21
Teton	2.9%	9.3%	38.6%	46.4%	2.9%	50.8%
Carbon	3.1%	9.8%	32.6%	51.8%	2.6%	45.5%
Johnson	2.1%	7.9%	35.1%	53.4%	1.6%	45.1%
Sublette	0.0%	6.4%	36.2%	54.8%	2.7%	42.6%
Weston	2.5%	6.4%	28.1%	61.1%	2.0%	37.0%
Sweetwater	2.7%	6.0%	27.3%	60.1%	3.8%	36.0%
Sheridan	1.5%	8.0%	26.4%	60.2%	4.0%	35.9%
Platte	2.4%	4.8%	28.4%	61.5%	2.9%	35.6%
Albany	2.5%	4.5%	27.7%	61.4%	4.0%	34.7%
Natrona	0.5%	7.3%	26.7%	63.9%	1.6%	34.5%
Wyoming	2.2%	5.6%	26.7%	62.2%	3.3%	34.5%
Laramie	3.4%	2.5%	28.3%	64.6%	1.3%	34.2%
Converse	1.5%	6.5%	25.4%	61.7%	5.0%	33.4%
Campbell	4.0%	5.4%	23.3%	64.4%	3.0%	32.7%
Goshen	1.6%	8.8%	21.2%	64.8%	3.6%	31.6%
Hot Springs	4.5%	5.0%	22.1%	65.3%	3.0%	31.6%
Park	2.1%	5.7%	22.9%	66.7%	2.6%	30.7%
Uinta	3.3%	2.8%	24.2%	58.3%	11.4%	30.3%
Crook	1.6%	5.3%	23.3%	65.1%	4.8%	30.2%
Fremont	0.5%	5.3%	23.9%	67.5%	2.9%	29.7%
Lincoln	1.0%	4.2%	23.4%	61.5%	9.9%	28.6%
Niobrara	3.4%	3.4%	21.8%	65.0%	6.3%	28.6%
Washakie	1.0%	5.2%	20.8%	65.6%	7.3%	27.0%
Big Horn	3.5%	3.5%	19.7%	68.7%	4.5%	26.7%

Counties in Table 32 are ranked based on the total percentage of adults who would allow a child under 21 to first drink alcohol.

### **Question 22.**

Based on Table 41, how do adult attitudes toward allowing minors to drink alcohol compare to the rest of the state? Is your community higher, lower, or about the same? Discuss the differences.

According to the data provided in table 21 Goshen County is overall below state average. Once again, professionals among the group participating in the completion of the Needs Assessment WB state that

- it is quite possible that adults are not accurately reporting
- “Ignorance is bliss” , the problem with alcohol will happen to someone else
- The overall attitude of the community is that minors drinking is acceptable because it is “ a right of passage” in Goshen County.

## **Town Hall Meeting**

As part of the town meeting that you will hold for this needs assessment you will be discussing the social availability of alcohol in your community. In particular you will be discussing how youth and adults in Wyoming obtain and consume alcohol. You will also be discussing to what degree the community members feel that social availability contributes to the misuse of alcohol in your community. A sample protocol for the town hall meeting and ideas on how to gather and analyze qualitative data from this meeting can be found in Appendix C.

## **Other Local Data**

Feel free to consider and analyze other local data that will help you better understand how and to what extent social availability may influence alcohol-related problems in your community. For example, you may have data from your college campus or local police department on parties where alcohol is freely available. If you have other local data describe the results here.

## Social Availability Questions

### Question 23.

Based on information gathered from the PNA, and the 2006 Alcohol Use Issues Survey, your town hall meeting, and other local data, what are the concerns around social availability that might contribute to the misuse of alcohol and its consequences in your community? Justify your decision.

Social availability certainly warrants the attention of those living in Goshen County. The children within the community do not face large challenges when making an effort to obtain alcohol, the accessibility makes it rather simple for them. There is a large percentage of the adult population who believe that it is ok that the youth are drinking. There is also a large area of concern when looking at the liquor law violations/compliance failure rates and the fact that the large majority of community events in Goshen County serve alcohol.

A large percentage of the community, based on surveys, town hall meetings, and participation in the Coalition and CAC indicate that the consequences for these areas of concern and failure surrounding alcohol misuse contribute to the continuing problem because they are not stringent enough.

### Question 24.

Based on these considerations, to what degree does your CAC believe social availability is impacting the misuse of alcohol and its consequences for your community? Justify your decision.

(place an "x" next to a number from 0 to 10)

No impact									Major impact	
0	1	2	3	4	5	6	7	8	9	X10

Justification provided in answer to question #23

## Promotion

Promotion refers to attempts by alcohol retailers and industry to increase demand through the marketing of their products. Once again, this will require some original data collection to acquire a sense of the depth of marketing surrounding alcohol in your community, and you will need to send some of your results to WYSAC to create comparisons among all 24 PF funded communities.

## Sponsorships

List all the major community events and festivals in your community between March 2006 and February 2007, under the heading Community Event or Festival in Table 42. Next find out how many of these events or festivals had alcohol-related sponsors and in the column headed alcohol-related sponsorship write the sponsors name(s) if there is an alcohol-related sponsorship and no if there is not. For example, Pendleton Whisky is the official sponsor of the hospitality tent at Cheyenne Frontier Days; Jubilee Days in Laramie features beer tents throughout downtown. Calculate the percentage of festivals and events in your community that had alcohol-related sponsorships. This data must be collected and submitted to Dr. Rodney Wambeam at WYSAC (rodney@uwyo.edu) no later than April 30, 2007. Data for all 24 grantee communities will be compiled and returned to each grantee no later than May 15, 2007 in order for you to compare your results to the rest of the state.

Table 42. Community Events and Festivals and Their Alcohol-Related Sponsors

Community Event or Festival	Dates	Alcohol-Related Sponsorship
Fight Night	October 06	Bronco Bar
Juma Rodeo	2 times in 06	None – alcohol was served
EWC Rodeo	Feb 07	None
Goshen County Fair	Aug 06	None – alcohol was served
Breast Cancer Awareness Banquet	October 06	None
GCTF SA/FV	Sept 06	None – alcohol was served at all 6
6 Golf Tournaments		None – alcohol was served
St. Joseph's Christmas party	Dec. 06	None- alcohol was served
Knights of Columbus Banquet		None – alcohol was served
Shrines Club		None – alcohol was served
American Legion/Armed Forces		None – alcohol was served
EWC Foundation Ball		None – alcohol was served

Community alcohol-related sponsorship percentage = \_\_\_\_ There was only 1 major community event a that was actually sponsored by an alcohol establishment/dealer \_\_\_\_ 2.7% \_\_\_\_

There were 37 different community events, including weddings, that served alcohol and minors were present

State alcohol-related sponsorship percentage = \_\_\_\_ 24.7% \_\_\_\_

## Advertising

Advertising in America and Wyoming has become ubiquitous. To gain a better sense of the magnitude of alcohol advertising in your community you are going to follow a specific research protocol to gather data on alcohol marketing in a sample of local newspapers and on billboards submitted to Dr. Rodney Wambeam at WYSAC ([rodney@uwyo.edu](mailto:rodney@uwyo.edu)) no later than April 30, 2007. Data for all 24 grantee communities will be compiled and returned to each grantee no later than May 15, 2007, in order for you to compare your results to the rest of the state.

### Step One

The first measure of alcohol advertising in your community will be to count all the billboards in your county. To do so, you will need to drive all the U.S. and State highways and interstates in your community. In addition you will need to drive all the business districts in your community's towns and cities. Using a map, mark the location of each billboard you encounter. A billboard that advertises alcohol, alcohol sales, or alcohol establishments should be marked with a red mark, whereas a billboard that does not advertise alcohol should be marked with a green mark. Each billboard sign should only receive one mark per advertisement presented on that billboard. If a billboard is visible from more than one road, highway or interstate, then it should only be counted once.

After marking the map with all the billboards in your community, record both the number of billboards advertising alcohol and the number of billboards not advertising alcohol. To calculate the percent of billboards which advertise alcohol in your community, simply divide the number of alcohol-related billboards by the total number of billboards. This is a snapshot of billboard advertisements on roads and highways across your community. Return your community's percentage of alcohol-related billboards to WYSAC by April 30, 2007.

Number of billboards advertising alcohol =   3  

Number of billboards not advertising alcohol =   30  

Percentage of billboards advertising alcohol =  9.2% 

State percentage =  7.3 

### Step Two

In this next step there will be two concurrent parts. The first part will involve counting the number of alcohol advertisements in your local newspaper(s). The second part will involve counting the number of alcohol advertisements that specifically market promotional events that encourage the increased use of alcohol. The basic methodology you follow is the same for both parts.

To measure the number of alcohol advertisements you will need to look at copies of the major local newspapers in your community at four specific time points during the past year. Going in reverse chronological order, you will need to examine all the papers for the following time periods:

- March 25, 2007 to March 31, 2007
- December 24, 2006 to December 30, 2006
- September 10, 2006 to September 16, 2006
- July 2, 2006 to July 8, 2006

The data collection will capture information about two holiday periods and two non-holiday periods. Data collection from March 25, 2007 to March 31, 2007 should use the newspapers issues as they are released. Back issues used for the December, September and July data collection periods should be archived and available either from the local library or local newspaper supplier.

Note, you will need to examine all issues of the newspaper during the identified time periods. For instance, if your major newspaper only appears once per week you would only count that single day. If the newspaper is biweekly, then you will examine the two issues in the week. If the newspaper is daily, then you will examine all seven issues in the week. If your newspaper only appears once per month, count the ads that appear in that single monthly issue regardless of which week it appears.

The reason for this data collection is to better understand exposure to alcohol marketing. As a result, a newspaper that appears only once a week provides less exposure than one that appears every day.

When examining the newspapers, please count all advertisements for alcohol brands, alcohol distributors, liquor stores, bars, and saloons. You will also need to count restaurant advertisements that mention alcohol or bar service. You should look at both the regular print advertisements and the classifieds in your search.

As you count the alcohol advertisements, also note the number of advertisements that market promotional events encouraging the increased use of alcohol. To be more exact, count the number of advertisements for events like “ladies' night,” “happy hour,” unlimited drinking for a fixed price or over fixed time period, free or reduced priced drinks with a coupon, or “2-for-1 night,” that encourages people to over-consume alcohol in retail establishments.

The following example illustrates how the data collection should be done in a week. Albany County members would look at issues of the Laramie Daily Boomerang for March 25 to 31. This time period includes papers for March 25, 27, 28, 29, 30 and 31 because there is no paper printed on March 26. Similarly, Albany county members also examine the local college newspaper called the Branding Iron, which is published on March 27, 28, 29 and 30. A count from the Daily Boomerang newspapers of that time period might find four ads on Sunday, zero on Monday because there is no newspaper, four on Tuesday, four on Wednesday, eight on Thursday, ten on Friday, and six on Saturday for a total of 36 alcohol advertisements

during the week of March 25, 2007. A count from the Branding Iron may produce two ads on Tuesday, 5 ads on Wednesday, four ads on Thursday, and three ads on Friday for a total of 14 alcohol advertisements during the week of March 25, 2007. When these two papers are combined there are 50 alcohol advertisements. Of these 50 alcohol advertisements, 20 of them may be advertisements for free drinks, dollar drinks, and happy hours etc.

After counting the number of advertisements and special promotions in all your local news papers, complete Table 43 below and send to Dr. Rodney Wambeam at WYSAC (rodney@uwyo.edu) WYSAC no later than April 30, 2007. WYSAC will compile your results with the other grantees data and return a state average and grantee comparison chart to you by May 15, 2007.

Table 43. Local Alcohol Advertisements and Promotional Events, March 2006 to February 2007

Name of Paper	Frequency of Paper	Time Period	Total Number of Alcohol Advertisements in Local Newspaper	Total Number of Promotional Event Advertisements in Local Newspaper
Torrington Telegram	2 X per week	March 25, 2007 to March 31, 2007	1	0
		December 24, 2006 to December 30, 2006	3	0
		September 10, 2006 to September 16, 2006	0	0
		July 2, 2006 to July 8, 2006	2	0
		March 25, 2007 to March 31, 2007		
		December 24, 2006 to December 30, 2006		
		September 10, 2006 to September 16, 2006		
		July 2, 2006 to July 8, 2006		

Community average = \_\_\_\_1.5\_\_\_\_

State average = \_\_\_\_11.5\_\_\_\_

#### Question 25.

Based upon the newspaper data you collected above and the statewide analysis sent back to you by WYSAC, how does the magnitude of alcohol advertising in your community compare to that across the state. Is your alcohol advertising smaller, greater, or about the same as other alcohol advertising across the state? Discuss the differences.

Advertisement via local newspapers is not really an issue for Goshen County, very rarely are actual ads promoting alcohol placed. The radio advertisements for alcohol at local liquor establishments, from sales to happy hour promotions are very frequent in Goshen County.

## Other Local Data

Feel free to consider and analyze other local data that will help you better understand how and to what extent the promotion of alcohol in your community may influence alcohol-related problems in your community. For example, you may have information on alcohol advertising in or on liquor stores, convenient stores etc, or flyers passed out around town or other ways that alcohol might be promoted on college campuses, or at schools. If you have other local data describe the results here.

## Promotion Questions

### Question 26.

Based on information gathered from alcohol sponsorship of events, billboards, newspaper advertisements, and other local data, what are the concerns around promotion that might contribute to the misuse of alcohol and its consequences in your community? Is your alcohol advertising smaller, greater, or about the same as other alcohol advertising across the state? Justify your decision.

**Promotion is an issue, but not as big of an issue as you would see it in other communities, because there is a lack of other things to do in the County, promotion isn't as necessary, it's just something that is "known" to go the bars.**

### Question 27.

Based on these considerations, to what degree does your CAC believe promotion is influencing the misuse of alcohol and its consequences in your community? Justify your decision.

(place an "x" next to a number from 0 to 10)

No impact						Major impact					
0	1	2	3	4	X5	6	7	8	9	10	

**Justification provided in answer to question #26**

## Community Norms

Community norms refer to the acceptability or unacceptability of certain behaviors in a community, and it is the one causal factor that most often overlaps with other factors. In this section you will mostly gather data around community events. However, be aware that issues like social availability and law enforcement also reflect community norms.

## Prevention Needs Assessment

There are three questions from the 2006 PNA that ask about attendance at events where alcohol was being sold, adults were drinking alcohol, or adults were drunk. Complete Table 44 below using data provided in Appendix D, Tables K, L, and M in this workbook.

Table 44. Percentage of Students Who Attended Community Events Where Alcohol Was Sold, Adults Were Drinking, or Adults Were Drunk by Grade (2006 PNA)

Grade	Alcohol was Sold	Adults were Drinking	Adults were Drunk
County 6 <sup>th</sup> grade	32.8	50.4	18.1
Wyoming 6 <sup>th</sup> grade	41.1%	54.3%	22.6%
County 8 <sup>th</sup> grade	55.6	60.7	34.1
Wyoming 8 <sup>th</sup> grade	57.0%	65.7%	43.9%
County 10 <sup>th</sup> grade	74.3	79..6	61.8
Wyoming 10 <sup>th</sup> grade	65.9%	72.3%	57.7%
County 12 <sup>th</sup> grade	73.6	75.7	55.1
Wyoming 12 <sup>th</sup> grade	70.8%	74.9%	64.7%
County 6 <sup>th</sup> - 12 <sup>th</sup> grade	59.6	67	42.9
Wyoming 6 <sup>th</sup> - 12 <sup>th</sup> grade	56.7%	65.5%	44.5%

**Question 28.**

Based on PNA data in Table 44, how does your community compare to the rest of the state when it comes to students attending events where alcohol is sold, adults are drinking, or adults are drunk? Are your problems smaller, greater, or about the same as across the state? Discuss the differences.

As the children get older and reach a certain point in high school it seems, according to table data, that Goshen County has a greater problem than the state average when it comes to youth attending events where alcohol is sold and adults are drinking. When it comes to youth witness adults who are drunk at events, we are lower than the state average according to the table, but this information based on professional opinions is incorrect. Goshen County has a large number of youth who witness adult drunkenness.

## Wyoming Alcohol Use Issues Survey 2006

Once again, data from the Alcohol Use Issues Survey are of use in this needs assessment. Specific to community norms are the statements, “Alcohol should not be sold at community events, such as fairs, sporting events, parades, and rodeos,” and “In your opinion is drinking and driving in your community...”

Counties are ranked in Table 45 based upon how much they disagree with the statement “Alcohol should not be sold at community events, such as fairs, sporting events, parades, and rodeos.” The higher the level of disagreement the greater the community norm to serve alcohol at community events. Counties are ranked in Table 46 based on how much they feel drinking and driving is a serious or somewhat serious problem in their community. In order to compare individual counties to Wyoming as a whole, Wyoming has been included in the tables and is shaded. Anything above this shaded line is higher than the state average and anything below this shaded line is lower than the state average.

Table 45. Percentage of Agreement or Disagreement to the Statement “Alcohol Should Not be Sold at Community Events, Such as Fairs, Sporting Events, Parades, and Rodeos” (Wyoming Alcohol Use Issues Survey, 2006)

County	Somewhat or strongly disagree	Neither agree nor disagree	Somewhat or strongly agree
Teton	66.0%	4.7%	29.4%
Sublette	57.9%	4.6%	37.4%
Albany	53.2%	6.4%	40.3%
Sheridan	52.3%	7.1%	40.5%
Carbon	51.6%	8.1%	40.5%
Johnson	51.6%	7.2%	41.2%
Crook	46.7%	6.2%	47.2%
Park	46.6%	9.3%	44.0%

Wyoming	45.7%	8.4%	45.9%
Uinta	45.6%	6.0%	48.4%
Sweetwater	45.5%	8.4%	46.0%
Hot Springs	45.3%	6.0%	48.7%
Campbell	43.6%	8.9%	47.5%
Natrona	43.6%	10.8%	45.7%
Converse	43.5%	7.7%	48.8%
Platte	43.5%	6.7%	49.7%
Laramie	42.8%	9.2%	47.9%
Fremont	41.5%	9.1%	49.3%
Washakie	40.9%	6.1%	53.1%
Big Horn	40.2%	8.5%	51.3%
Weston	39.6%	6.1%	54.3%
Lincoln	37.4%	8.1%	54.6%
Niobrara	34.1%	6.6%	59.2%
Goshen	33.7%	10.6%	55.8%

Table 46. In Your Opinion, is Drinking and Driving in Your Community a... (Wyoming Alcohol Use Issues Survey, 2006)

County	Not a problem at all	Not a serious problem	A serious problem/A somewhat serious problem
Sweetwater	1.1%	5.3%	93.7%
Fremont	0.9%	7.0%	92.1%
Laramie	4.2%	5.5%	90.3%
Campbell	2.0%	9.5%	88.6%
Natrona	2.6%	8.2%	89.2%
Albany	2.0%	9.1%	88.9%
Teton	2.7%	8.8%	88.5%
Sheridan	3.4%	8.8%	87.8%
Wyoming	2.9%	10.4%	86.8%
Sublette	2.6%	10.9%	86.5%
Goshen	4.1%	11.3%	84.6%
Platte	4.4%	11.3%	84.2%
Washakie	3.6%	13.0%	83.4%
Converse	1.5%	15.5%	83.0%
Hot Springs	3.0%	14.0%	83.0%
Uinta	2.4%	16.7%	80.9%
Park	3.1%	17.3%	79.5%
Carbon	3.7%	16.8%	79.4%
Niobrara	4.0%	17.3%	78.7%
Crook	3.2%	20.1%	76.7%
Johnson	3.7%	19.8%	76.4%
Big Horn	4.7%	19.2%	76.2%
Weston	3.4%	21.7%	74.8%
Lincoln	4.3%	22.6%	73.1%

**Question 29.**

Based on Table 45, how do attitudes toward selling alcohol at community events in your community compare to attitudes toward serving alcohol at community events across the state?

**Based on professional opinion and community opinions from town hall meetings and interviews, the majority of people in Goshen County would be very upset if alcohol weren't served at certain events such as the fair, rodeo's, etc.**

**The attitude in Goshen County as a whole is that alcohol should be sold at large community events.**

**When the only thing offered for families to participate in within the county involve the sale of alcohol it only promotes another generation of attitudes that alcohol is the thing to do in Goshen County.**

**Question 30.**

Based on Table 46, how do attitudes toward drinking and driving in your community compare to attitudes toward drinking and driving across the state?

**We are lower than the state average in the believing that drinking and driving in Goshen County is a serious problem. People don't see the seriousness of driving drunk. It is another social norm to drive home after a few drinks at the bar without thinking of laws or other consequences.**

## Special Alcohol Permits for Community Events

Another way to understand community norms around alcohol use is through the number of alcohol permits distributed for community events. Table 47 shows the combined number of both special event permits and malt beverage permits per 100,000 population of those 14 years and older. These types of permits cover most sales of alcohol at fairs, rodeos, and other special events. The population of those 14 years and older is used to be consistent with research done by the National Institute on Alcohol Abuse and Alcoholism regarding sales per gallon of ethanol (National Institute on Alcohol Abuse and Alcoholism, 2006.)

**Table 47. Number of Special Event and Malt Beverage Liquor License per 100,000 Population Aged Fourteen Years and Older (2005 Wyoming Department of Revenue)**

County	Liquor Licenses	Population	Rate per 100,000 population
Teton	21	16396	128.08
Crook	6	5268	113.90
Sublette	4	5851	68.36
Big Horn	6	9339	64.25
Carbon	8	13006	61.51
Johnson	2	6644	30.10

Converse	3	10674	28.11
Hot Springs	1	3987	25.08
Wyoming	83	423760	19.59
Sweetwater	6	30887	19.43
Park	4	22887	17.48
Weston	1	5771	17.33
Lincoln	2	13113	15.25
Platte	1	7352	13.60
Fremont	4	30015	13.33
Albany	3	26843	11.18
Natrona	5	57611	8.68
Sheridan	2	23250	8.60
Uinta	1	15809	6.33
Laramie	3	69756	4.30
Campbell	0	30244	0
Goshen	0	10366	0
Niobrara	0	1991	0
Washakie	0	6700	0

### Question 31.

Based on Table 47, how does your community's rate of special event and malt liquor licenses compare to the rest of the state? Is it higher, lower or about the same? Discuss the differences. **This table is completely inaccurate. In Goshen County there were 37 special events that served alcohol from March 06- February 07, they got around the reporting loophole by using establishments who already had liquor licenses and did not need to apply for a special one.**

A number of members of the coalition report

\*While it is up to the servers to ensure that minors are not being served, they are not securing or policing the party/event and a huge percentage of minors drink at these parties.

\*Again, attitude comes into play at these events, such as seeing a young soldier off to war, where they believe that "if I can send my child off to war to defend his/her country, then the child can have a beer."

## Town Hall Meeting

As part of this needs assessment you will need to conduct a town hall meeting, and in that meeting you will need to find out about the general attitudes in your community around alcohol and a description of the alcohol culture in your community. Information gathered from this town hall meeting will be used to answer Question 32 below. A sample protocol for the town hall meeting and ideas on how to gather and analyze qualitative data from this meeting can be found in Appendix C.

## Other Local Data

Feel free to consider and analyze other local data that will help you better understand how, and to what extent community norms may influence alcohol-related problems in your community. For example, you may have completed earlier focus groups or surveys of youth,

parents, school personnel, or community members. If you have other local data describe the results here.

## Community Norms Questions

### Question 32.

Based on information gathered from the PNA, the Wyoming Alcohol Use Issues Survey 2006, special alcohol permits for community events, town hall meetings, and other local data, what are the concerns around community norms that might contribute to the misuse of alcohol and its consequences in your community? Justify your decision.

The tables in this section provide what the Coalition and other professionals within the community feel is inaccurate data. However, the attitudes or community norms certainly seem to show that alcohol misuse among adults and youth is normal and or completely acceptable. A large contribution to this community norm is the young age at which youth are allowed to experiment with alcohol, this just encourages behaviors and attitudes associated with alcohol misuse through adulthood, therefore contributing to the continuation of generations' alcohol misuse. As a community we need to identify methods to break this cycle of thinking and encourage healthier attitudes if we plan on actually making a positive difference for the future of this community.

### Question 33.

Based on these considerations, to what degree does your CAC believe community norms are impacting the misuse of alcohol and its consequences in your community? Justify your decision.

(place an "x" next to a number from 0 to 10)

No impact										Major impact	
0	1	2	3	4	5	6	7	8	9	X	10

Justification provided in answers to question #32

## Individual Factors

Individual factors that can influence the misuse of alcohol include biological factors, socioeconomic factors, and individual attitudes, beliefs and perceptions around alcohol use and drug use. Since little can be done to change biological predisposition, the primary focus of this last contributing factor will focus on individual attitudes, along with unique characteristics in your community that may influence the misuse of alcohol.

## Prevention Needs Assessment

Often evidence-based prevention efforts target specific individual level factors that influence

alcohol-related problems. In Wyoming, the major way these are measured is through risk and protective factors on the PNA. One of the best ways to interpret the PNA results is to look at which risk and protective factors are the best predictors of substance use. In preparation of this workbook, WYSAC used statistical modeling at the state level to identify the PNA risk and protective factors that best predict 30-day alcohol use across the state. Based on the statistical models that were developed, WYSAC has provided in Appendix D of this workbook the percentage of students in your community who are at high, medium and low risk for substance use based on the identified combination of risk and protective factors. You will also use your county's PNA report to list the risk and protective factor prevalence rates which are most predictive of 30-day alcohol use.

Using the risk tables in Appendix D of this workbook complete Table 48 on the next page. Fill in the percentage of students in the 6<sup>th</sup>, 8<sup>th</sup>, 10<sup>th</sup>, and 12<sup>th</sup> grades who are at high, medium and low risk for 30-day alcohol use. If the percentage of high risk students in your community is larger than the state, this suggests that the individual factors may play a larger role in the misuse of alcohol by youth in your community. If the percentage of low risk students is higher than the state's rates, then individual factors may play a lesser role in the misuse of alcohol by youth in your community. In other words, the higher the percentage of students who are considered high-risk, the more you may consider these individual factors as impacting 30-day use of alcohol in your community.

After completing Table 48, you will need to use your county's PNA report to list the risk and protective factor prevalence rates for the identified attitudes, beliefs, and perceptions that predict 30-day alcohol use. As was done in previous prevention projects, the factors with the highest prevalence rates will be considered the most influential, because they affect the greatest number of students. Throughout this process of interpreting the individual factors measured on the PNA, Eric Canen will be available to answer questions and help in the interpretation. You may contact Eric by email at [ecanen@uwyo.edu](mailto:ecanen@uwyo.edu) or by phone on (307) 760-0307.

Table 48. Percentage of Youth at Low, Medium, and High Risk Based upon the Combination of Predictive Factors (2006 PNA)

Grade	Level of risk	Percentage of students at each level of risk for the county	Percentage of students at each level of risk for Wyoming
6 <sup>th</sup> Grade	High	n/a	1.2%
	Medium	n/a	2.7%
	Low	n/a	96.1%
8 <sup>th</sup> Grade	High	10.7	14.9%
	Medium	17.4	15.8%
	Low	71.9	69.2%
10 <sup>th</sup> Grade	High	33.1	27.4%
	Medium	30.1	22.3%
	Low	36.8	50.3%
12 <sup>th</sup> Grade	High	43.4	30.9%
	Medium	19.2	23.9%
	Low	37.4	45.3%

Table 49. Risk and Protective Factors That Best Predict 30-Day Alcohol Use and Percentage of Students at Risk or Protected by Grade Level (2006 PNA)

Grade	Factors that best predict 30-day alcohol use	Percent of students at high risk or at low protection on predictive factors	
		State	Local
6 <sup>th</sup> Grade	Favorable Attitudes toward Drug Use	19.3%	15.3
	Intent to Use Drugs	13.8%	11.5
	Friends Use of Drugs	27.0%	25.4
	Sensation Seeking	56.4%	48.5
	Perceived Availability of Drugs	34.9%	29.7
	Parents Favorable Attitude toward Drug Use	16.7%	19.2
	Community Disorganization	34.7%	27.5
	Social Skills*	28.7%	32.1
8 <sup>th</sup> Grade	Favorable Attitudes toward Drug Use	29.9%	29.9
	Intent to Use Drugs	20.8%	17.3
	Friends Use of Drugs	45.1%	39.6
	Interaction with Antisocial Peers	49.5%	38.1
	Sensation Seeking	53.2%	51.9
	Parents Favorable Attitude toward Drug Use	32.4%	39.2
	Social Skills*	39.1%	40.0
10 <sup>th</sup> Grade	Intent to Use Drugs	25.7%	33.6
	Friends Use of Drugs	45.2%	59.9
	Sensation Seeking	51.9%	54.7
	Parents Favorable Attitude toward Drug Use	46.7%	53
	Social Skills*	44.2%	44.7
12 <sup>th</sup> Grade	Favorable Attitudes toward Drug Use	35.1%	40.2
	Favorable Attitudes toward Antisocial Behavior	44.6%	43.9
	Intent to Use Drugs	28.7%	41.7
	Sensation Seeking	52.9%	57
	Parents Favorable Attitude toward Drug Use	60.8%	64
	Social Skills*	33.3%	39.8
	Family Opportunities for Pro-social Involvement*	35.1%	31.6

\* List the percent of Students who are “at-low-protection” by completing the following formula:

$$L = 100 - x$$

where L is the percentage of students at-low-protection

in addition, x is the protective factor prevalence rate listed in your community PNA report.

**Question 34.**

Based on data in Table 48, how does your level of risk based on the combination of risk and protective factors compare to the risk levels for the State of Wyoming? Is your percentage of students at high risk of alcohol use bigger, smaller, or about the same as the state? Discuss the differences.

The table indicates that for Goshen County the risk increases as the students approach the 10<sup>th</sup> grade level and then continues to rise. The Coalition agrees that the information contained within this table is accurate and coincides with the knowledge that the professionals within the Coalition bring with them based on their day-to-day dealing with youth in the community.

**Question 35.**

Based upon discussions with the 2006 PNA researchers and the data in Table 49, which of the risk factors listed there have the highest prevalence rates for your community?

This table provides data that is consistent with data from table 48 in that Goshen County youth see an increase in risk factors as they approach the 10<sup>th</sup> grade level. The risk factors of particular concern with high prevalence rates in Goshen County are “Parents Favorable Attitude Toward Drug Use” and “Social Skills”, although all of the risk factors can be considered as contributing to the choices and behaviors youth make.

## Graduation Rates

Consider the following table which lists the graduation rate for each county. Counties are ordered based on the lowest graduation rates at the top. To compare individual counties to Wyoming as a whole, Wyoming's overall graduation rate has been included in the table and is shaded. Anything above this shaded line has rates that are less than the state average and anything below this shaded line have rates that are higher than the state average.

Table 50. Graduation Rates

County	Graduation Rate
Natrona	70.99%
Laramie	78.00%
Carbon	78.25%
Fremont	78.48%
Sweetwater	81.32%
Wyoming	81.51%
Campbell	81.57%
Hot Springs	82.96%
Johnson	83.53%
Converse	83.67%
Washakie	83.80%
Lincoln	83.95%
Sheridan	84.09%
Albany	84.67%
Platte	85.20%
Uinta	86.12%
Niobrara	86.67%
Sublette	87.01%
Goshen	88.55%
Teton	89.83%
Big Horn	90.62%
Park	90.64%
Weston	94.09%
Crook	96.33%

**Question 36.**

Based on data in Table 50, how do your graduation rates compare to the Wyoming graduation rates? Is your percentage bigger, smaller, or about the same as the state? Discuss the differences.

**Our graduation rate is higher than the state average.**

**Dropout rates are increasing according local school officials due to some requirements.**

**\*A large number of youth in high school in Goshen County are actually not reading at grade level or able to do the basic math. Thus, many high school level teachers are forced to do a good deal of remedial work with students.**

**\*There are approximately 12 students out of every 100 that do not graduate in Goshen County.**

## Town Hall Meeting

As part of this needs assessment you will need to conduct a town hall meeting, and in that meeting you will need to find out what the community members feel is unique about your community. In other words, you will need to discuss what individual characteristics in your community might contribute to the misuse of alcohol in your community. Information gathered from this town hall meeting will be used to answer Question 37. A sample protocol for the town hall meeting and ideas on how to gather and analyze qualitative data from this meeting can be found in Appendix C.

## Other Local Data

Feel free to consider and analyze other local data that will help you better understand how and to what extent individual factors in your community may influence alcohol-related problems in your community. For example, you may have socio-economic or demographic data that illustrates the differences between individuals in your community and the rest of the state. You may want to include information from alternative schools if there is one in your community. If you have other local data describe the results here.

## Individual Factor Questions

### Question 37.

Based on information gathered from the PNA, graduation rates, town hall meetings, and other local data, what are the concerns around individual factors that might contribute to the misuse of alcohol and its consequences in your community? Justify your decision.

Based on information that was collected from a number of source, some of the issues that are of concern are the number of parents with alcohol and substance abuse issues within the community, social availability, decreased academic achievement, and poor community attachment. A number of individuals surveyed and contributing directly to this assessment feel that at the center of this endless, generation cycle of community misuse of alcohol is the community's inability to provide alternatives to participating in events that serve alcohol or where alcohol is present. The people believe that a community center of some level will provide community alternatives. This would not solve all of the social and community issues, but would be beneficial and promote the change in attitudes that the Coalition and other professionals know needs to be addressed. A community center would be a step in helping to provide healthier behaviors for families, which in turn provide contributions toward a healthier society.

### Question 38.

Based on these considerations, to what degree does your CAC believe individual factors are impacting the misuse of alcohol and its consequences in your community? Justify your decision.

(place an "x" next to a number from 0 to 10)

No impact								Major impact		
0	1	2	3	4	5	6	X7	8	9	10

# Prioritization

**Task Three:**  
**Rank the Six Causal Areas from the Greatest Contributor to Your Community's Problems to the Smallest Contributor**

## Prioritizing

The next stage involves prioritizing the causal areas. The first step is achieved by placing the appropriate scores from Questions 14, 20, 24, 27, 33, and 38 next to its related causal area. Based on the scores, rank each causal area with one being the highest priority (the area with the highest score) and six the lowest. In the case of a tie, decide which area is of higher priority for your community in relation to the misuse of alcohol. After having completed the ranking, justify your prioritization on the next page. Then work with the researchers at WYSAC and your CAC who will help you decide what combination of causal areas would be best to focus on in reducing the misuse of alcohol in your community.

Score	Rank	Causal Area
8	3	Retail Availability
5	6	Criminal Justice
10	2	Social Availability
5	5	Promotion
10	1	Community Norms
7	4	Individual Factors

### Question 39.

Justify your prioritization of the causal factors.

Although Community Norms and Social Availability have been prioritized as 1 and 2 respectively, the Coalition feels that they are of the same priority. Throughout the entire process of gathering data and completing this workbook, the community and Coalition have maintained the highest area of concern within Goshen County are the two causal factors named above.

There is deep concern over the attitudes and behaviors that are part of everyday life for a large percentage of the population within the community. The attitudes of parents openly accepting their minor child drinking alcohol and justifying it as a “rite of passage” came to the forefront on a number of occasions to numerous to mention as this portion of the project was being completed. This attitude continues and is generational. A number of people interviewed could go back a number of generations and elaborate on stories of parents, grandparents, and great-grandparents allowing drinking before the legal age.

This particular causal factor present a great challenge to Goshen County, as generations of attitudes and habits are hard to break, but it is an area that the Coalition recognizes must be addressed if effective and positive changes are ever going to be established in the community.

Social Availability rates up there with the deep concern over community norms because the two go hand-in-hand. Social availability is driven by the large percentage of community members whose attitudes allow the misuse of alcohol. Once again. This is causal factor presents a great challenge, but must be addressed if there is going to be a positive change within the community regarding the misuse of alcohol.

Retail availability rates number three because it too is driven by the attitudes and behaviors of generations of people in Goshen County. Retail availability is established on the basis of supply and demand. The attitudes in Goshen County place the demand on availability quite high and therefore it is increased. If the issues of attitudes and behaviors can be effectively addressed within this community the causal area of retail availability will resolve itself through the natural order of supply and demand.

Individual factors, the Coalition once again see this as an area that will begin to correct itself if the area of attitudes and behaviors are effectively addressed. The misuse of alcohol contributes to a large number of negative individual factors, decreasing the behaviors of participating in the misuse of alcohol will improve individual factor.

Promotion was rated number 5 by the Coalition because it is not a large contributing factor to the misuse of alcohol in Goshen County. We do not have a large number of ads, billboards, or other promotional events that are specifically designated to alcohol. The concerns here were minimal.

Criminal Justice was rated number six due to the fact that the community and Coalition believe that local law enforcement are doing everything within their ability within the laws to deter misuse of alcohol by members of the community, whether it be youth or

adults. The Coalition also feels that the judicial system is very effective when dealing with individuals who have been convicted of alcohol related crimes. The general consensus is that the only improvements that could be made is the increase in manpower, and this is not the direct decision of local law enforcement, but is determined rather by funding.

# Resource Assessment

**Task Four:**  
**Evaluate the Current Resources Going toward**  
**Each of the Six Causal Areas**

## Resources

Most grantee communities already do some sort of substance abuse prevention, ranging from implementing school based programs to pursuing policy changes. Therefore, it is important to consider the resources already being used in any of the six causal areas. Complete Table 51 below by listing current strategies and resources being expended within each causal area. Note that these must include some focus upon the prevention of the misuse of alcohol. Resources most often refer to funding but could also refer to other efforts like individual time spent pursuing policy change, dedicated staff, etc. Complete this resource assessment with your Community Advisory Council. You may want to consider certain school or local policies surrounding alcohol.

Table 51. Current Resources and Strategies Focusing upon the Misuse of Alcohol by Causal Area

Causal Area	Strategies	Resources
Retail Availability Coalition's opinion is that they are Unaware of strategies in this area.		
Criminal Justice	Youth Alternatives	OJJDP, WCCA, Family Preservation
Social Availability	DARE Safe and Drug Free Schools	Substance Abuse Prevention Grant
Promotion	Specific strategies not identified	
Community Norms	Youth Alternatives	Substance Abuse Prevention Grant; Strengthening Families
Individual Factors	Youth Alternatives	Family Preservation

# Final Question

**Task Five:**  
**Determine What Combination of Causal Areas Your PF  
Project Will Target**

## Your Final Conclusions

Now that you have considered the data surrounding your community's alcohol problems, as well as each causal area for these problems, you need to decide what to do. This decision will ultimately be part of your community's PF Strategic Plan and lead to very specific evidence-based strategies for you to implement. For now, think about your data and especially your final rankings on page 66 as well as your resource assessment on page 69. Also, mull over the possible connections among the six causal areas. Would it be possible to target social availability without also targeting community norms? Will changes in retail availability necessarily require changes in the enforcement of policy? Now answer the following question.

## Final Needs Assessment Question

### Question 40.

It is very unlikely that your community can or needs to address every possible cause or implement every possible evidence-based strategy to change alcohol-related problems. What combination of causal areas is your community going to target with the PF project, and why? Goshen County would like to identify evidence based programs that would assist in targeting community norms and social availability to effectively establish a base on which new attitudes can be built and contribute to positive changes surrounding the misuse of alcohol in Goshen County. With these two causal areas being of highest priority and concern among those individuals contributing to the completion of this workbook, it is felt that the other causal areas will begin to correct themselves.

## Appendix B. Law Enforcement Interviews

One method for obtaining data is the face-to-face interview. With this method, you talk to each participant directly. This can be done in the participant's workplace, in your office, or any other suitable place. We recommend that you use a semi-structured interview format. This means that you will ask a set of questions prepared in advance. Clarification to follow-up questions may still be used. By asking general questions and having your participants provide answers in their own words, you may gain more complete information. The interview should be structured, but not so structured that it doesn't allow participants to discuss the misuse of alcohol in the community freely.

Although face-to-face interviews are a valuable way to collect data, they are not without drawbacks. The appearance and demeanor of the interviewer may affect the responses of the participants. Subtle changes in the way an interviewer asks a question may elicit different answers. Also, be aware that the interviewer may not respond similarly to all participants. For example, an interviewer may respond differently to a participant they know versus a participant they've never met before.

### The Interviewer

Fundamental to the interview is an interviewer who leads the discussion. This person should feel at ease speaking in a one-on-one conversation. The interviewer's goal is to make the participant feel comfortable in expressing themselves openly while remaining unbiased and keeping the discussion on track. It is recommended that you use someone who has conducted face-to-face interviews before. The interviewer should be able to ask the questions the same way for each participant and be able to read the questions in a neutral manner. The interviewer should also be practiced in active listening techniques that encourage participants to honestly and openly respond to the interview questions.

### Choosing the Participants

As part of this needs assessment you will need to conduct interviews of key law enforcement officers. You are encouraged to do at least one interview with the Chief of Police and one with the County Sheriff, but also you should consider what other interviews would be most appropriate and informative for your community. In addition to the law enforcement interviews, you may want to interview emergency room staff, alcohol treatment providers, or community leaders. One thing to consider when you choose your participants may include the length of time they have held their current position. Be careful not to choose someone who is too new to be able to accurately answer your questions. The interviewer should keep in mind the questions they are trying to answer, and they should feel creative in how they choose participants.

### Conducting the Interview

The interview should last about 30 minutes and follow a semi-structured format. Only the interviewer and the participant should be present during the interview, and the interviewer should make sure the interview is being conducted in a private location where others cannot hear the conversation. The interviewer should ask the questions and let the participant respond without interrupting. The interviewer should allow the participant to talk freely but not ramble about unrelated issues. The interviewer should make every attempt to find a balance between keeping the conversation on track and allowing it to flow naturally. To accomplish this, a “funnel” structure is often used. This approach is best outlined as a series of questions that move from general to specific.

### **Introductory Questions**

These are questions that introduce the topic for discussion. They should make the participant feel at ease with the interviewer. Usually they are not critical to the research; rather, they are intended to foster conversation and get the participant to start thinking about the topic.

### **Key Questions**

These are questions that drive the research. Their answers provide the best data for later analysis. They should be focused on the topic of interest and open-ended. The interviewer’s goal with these questions is to illicit open responses from the participant. You should avoid both questions that allow for short answers and questions that can be answered with a “yes” or “no.”

### **Ending Questions**

These questions bring closure to the discussion and enable the participant to look back upon previous comments. The participant should be asked to summarize their thoughts in some way.

### **Sample Questions You May Choose to Use for Your Interviews**

#### Introductory Questions:

What alcohol-related problems do you see in our community?

What factors do you believe are causing these problems?

#### Key Questions:

What percent of arrests are a result of alcohol-related offenses in our community?

What percent of convictions are a result of alcohol-related offenses in our community?

How many alcohol-related offenses do you think go undetected in our community?

*(The answers to the following four questions should be submitted to WYSAC no later than April 30, 2007)*

Are any officers assigned specifically to alcohol-related issues or offenses in our community?

How many officers are assigned?

What does their work consist of?

What special training do officers have in order to deal with alcohol-related offenses?

Do you hold sobriety check points?

How many sobriety check points were held in 2006?

How many drivers were tested?

How many positive BAC levels were obtained?

Where were the sobriety check points held?

Have you conducted any compliance checks for sales to intoxicated patrons?

How many compliance checks for sales to intoxicated patrons were conducted in 2006?

What else are law enforcement officers doing around the misuse of alcohol in our community?

What aren't law enforcement officers doing around the misuse of alcohol in our community?

What locations are known for alcohol-related incidents?

Are there particular people that are known for repeated alcohol-related incidents? If yes, what do you do to keep track or work with those people?

How do you think law enforcement could better address the alcohol-related problems in our community?

#### Ending Questions:

How do you think the criminal justice system is helping reduce the alcohol problems in our community?

How do you think concerns in the criminal justice system are contributing to the alcohol problems in our community?

Our goal is to find out what the driving factor is that is causing the misuse of alcohol in our community. Is there anything you would like to add or do you have any final comments?

Thank you for your time and input.

### **Recording and Using the Information**

In addition to taking notes, every effort should be made to record the law enforcement interview, but first you should seek permission from your participant. The use of recording equipment is important because it will allow you revisit the conversation and will also allow you to pull direct quotes made by the participant. This discussion can also be transcribed or at least listened to for quotes and general ideas. We suggest using a data matrix like the one found on the next page to keep track of major themes and quotes from the discussion.

The information gathered from these interviews should be used to compliment other quantitative work by the use of participant quotes and the grouping of ideas. The grouping of ideas refers to the categorizing of attitudes, feelings, or beliefs of the participant toward the topic. This may simply involve discussions revolving around a single question. In other cases this may involve outlining the major topics brought up during the interview.

## Appendix C. Town Hall Meeting Protocol

Holding a town hall meeting is an efficient way to gather qualitative data through the use of a focused group discussion. The reward for this work is dynamic information not just about what people feel, but about *why* people feel the way they do about a particular subject or idea. Group discussions have the potential to provide data with both accuracy and depth.

The town hall meeting is intended as a compliment to the rest of the needs assessment. What follows is a discussion of the general system for running a town hall meeting successfully.

### The Moderator

Fundamental to the town hall meeting is a moderator who facilitates the discussion. This person should feel at ease speaking in front of the group, but he or she is not a teacher. The moderator's goal is to make the participants feel comfortable in expressing themselves openly while keeping the discussion on track.

Becoming a talented moderator takes practice. For most novices the best strategy is to play the role of a *seeker of wisdom*. This role assumes that the participants have the wisdom you need and will share it if asked the right questions.

Most importantly, moderators must learn to listen and not talk.

### Choosing the Participants

You can do one town hall meeting or a series of meetings. These meetings should consist of at least 10 people who either volunteer to come or who you have chosen specifically. Most meetings are made up of a homogeneous group of strangers, but don't be afraid to invite specific individuals to attend the meeting. Key participants may include a community member, a police officer, a parent, an adolescent, someone from your advisory council, a bar owner, and any other individuals who may have insight on the topic.

### Setting the Rules

Prior to starting the discussion, the moderator should lay down a few ground rules. Generally, these include, only one person talking at a time; no side discussions among participants; no member should be put down because of their opinions; all thoughts and ideas are valued; and there are no wrong or right answers. Like with selection of group members, care and creativity should be used when setting rules.

### Conducting the Discussion

The discussion itself should last between 1 and 2 hours and follow a structured format. The moderator should make every attempt to find a balance between keeping the group discussion

on track and allowing it to flow naturally. In order to accomplish this, a “funnel” structure is often used. This approach is best outlined as a series of questions that move from general to specific.

### **Opening Question**

This is a “round robin” question that everyone answers at the beginning of the meeting. It is designed to be answered quickly and to identify those characteristics that participants have in common. It should make everyone in the group feel more at ease.

### **Introductory Questions**

These are questions that introduce the topic for discussion. Usually they are not critical to the research; rather, they are intended to foster conversation and interaction among the participants.

### **Key Questions**

These are questions that drive the research. Their answers provide the best data for later analysis. They should be focused on the topic of interest and open-ended. The moderator’s goal with these questions is to illicit discussion among the participants. You should avoid both questions that allow for short answers and questions that can be answered with a “yes” or “no.”

### **Ending Questions**

These questions bring closure to the discussion and enable participants to look back upon previous comments. Once again a “round robin” approach is best, and participants should be asked to summarize their thoughts in some way.

### **Sample Protocol You May Choose to Use for Your Town Hall Meeting(s)**

#### Opening Question:

Tell us your name and what brought you here today. (Round Robin)

#### Introductory Questions:

What are the alcohol-related problems in our community?

What factors are causing these problems?

A number of alcohol-related concerns and possible causes for those concerns have been mentioned. Let's think about three possible causes of alcohol misuse in particular. For the remainder of this discussion, let's think about social availability, community norms and individual factors.

### Key Questions

Let's start with social availability. Social availability refers to the procurement of alcohol through social sources such as friends and family.

Where are the youth in our community getting alcohol? Give examples.

Where are high school aged youth and younger getting alcohol?

Where are minors out of high school getting alcohol?

Where do adults in the community obtain alcohol?

Where is the alcohol consumed? For youth and adults?

What are your experiences with underage drinking at parties, or with adults providing alcohol to minors?

There's been a lot of talk about the misuse of alcohol as a problem in our community, but to what extent do you think *social availability* really contributes to the problem? (Round Robin).

Next, let's talk about community norms. Community norms reflect general attitudes about alcohol use and societal expectations regarding the level and type of use that is considered appropriate.

What are the norms of our community?

What are the general attitudes about drinking in our community?

What is the alcohol culture like?

In our community, is it okay to serve alcohol to a minor and if so, under what circumstances?

In our community, at what age is it acceptable to use alcohol?

What is our community's attitude toward drinking and driving?

What kind of groups or organizations promote the use of alcohol in our community?

Now that we've had this discussion, to what extent do you think *community norms* contribute to the misuse of alcohol in our community? (Round Robin)

Lastly, let's think about individual factors. Individual factors could be biological, socio-economic, or individual attitudes.

What makes the people in our community different and unique?

What individual characteristics contribute to the misuse of alcohol in our community?

Based on the things we've just talked about, to what degree do you think the *individual characteristics* of the people in our community are a cause of the misuse of alcohol? (Round Robin)

#### Ending Question:

Considering the three causes that we've talked about today, social availability, community norms, and individual factors, which one is the leading cause of the misuse of alcohol in our community? (Round Robin)

Our goal is to find out what is contributing to the misuse of alcohol in our community. Have we missed anything? Do you have any final comments?

Thank the participants for coming.

#### **Recording and Using the Information**

Every effort should be made to record the town hall meeting by having a colleague take notes and through the use of a tape or video recorder. The use of recording equipment allows the meeting to be revisited when needed. This discussion can also be transcribed or at least listened to for quotes and general ideas. We suggest using a data matrix like the one found on the next page to keep track of major themes and quotes from the discussion. Feel free to expand the table as needed.

The information gathered from this meeting should be used to compliment other quantitative work by the use of participant quotes and the grouping of ideas. The grouping of ideas refers to the categorizing of attitudes, feelings, or beliefs of the group toward the topic. This may simply involve discussions revolving around a single question. In other cases this may involve outlining the major topics brought up by the group.
